Green Web-II Medani P. Bhandari, 2022-09-01 This second edition of the book Green Web II Standards and Perspectives from the IUCN Program Policy Development in Environment Conservation Domain with reference to India Pakistan Nepal and Bangladesh investigates the IUCN s role in global biodiversity conservation policy as well as in national program development in India Pakistan Nepal and Bangladesh It explores how nature protection priorities and approaches are promoted or addressed by IUCN and how environment conservation policies are created and maintained in states of South Asia with different capacities It also evaluates IUCN s competency in biodiversity climate change nature conservation and

environmental policy formulation at the global regional and country levels This book adds to our knowledge firstly by contributing to a small but growing body of work on the sociology of international organizations International Governmental Organizations IGOs have previously been mainly the subject of political science Secondly it critically explores one of the largest and most active nature conservation organizations in the world Thirdly it also explores how IUCN actually goes about building protectoral programs with individual member nations Finally the research also shows the historical development of global institutions and IUCN s activities with member nations in helping to define or redefine the concept of global governance The outcomes of this research will also be beneficial for global collaboration networking and for the identification of common concerns among the many environmental and conservational organizations at the international and national level In this broader sense the research outcomes might be beneficial to constituencies of the global North as well as global South because of the nature and coverage of IUCN and its role in conservation policy formation This effort may serve as a model for additional research on international organizations Technical topics discussed in the book include The Motivation for Environmental Conservation How personal efforts make a difference The Role of International Environment Conservation Organizations The Political Economy of Organizations Network theory Institutional theory Stakeholder theory Governance theory Governance performance and Competitiveness Popularity indices Knowledge creation and diffusion Conservation commons

Devolution, Port Governance and Port Performance Mary R Brooks, Kevin Cullinane, 2006-11-13 The relationship between ports and governments has changed profoundly over the past quarter of a century Many governments have sought to extract themselves from the business of port operations and in many cases the provision of port services has devolved to local governments communities or private management and administration As such devolution implies a change in governance model this trend raises questions about consequent performance This issue examines the changed port management environment focusing particularly on government policies such as devolution regulatory reform and newly imposed governance models all of which have exerted a significant influence over the nature of that changed environment The issue is structured so as to first explore the devolution and port reform approaches for 14 countries or regions before examining how ports are governed and what the choice of governance might mean for their performance Part I introduces the issue and provides a framework for defining the basic concepts involved in devolution it paints a picture of the current port environment its likely future evolution and the expected impact this will have on the functioning of ports Part II examines the port industry in 14 countries or administrations and presents the thinking behind any devolution programs that have been implemented Part III focuses on port governance and devolution generally and examines governance from both strategic management and economics perspectives including topics such as governance models supranational governance and stakeholder conflict Part IV examines the measurement of port performance and closes by providing conclusions and a future research agenda This issue will be of interest to port managers government officials and academics alike Examines the

relationship between ports and governments with a focus on devolution Divided into sections that provide an overview evaluate the port industry discuss port governance and suggest new measures of port performance 14 countries or regions are addressed Plants' Responses to Novel Environmental Pressures Alessio Fini,Massimiliano Tattini,Raquel

Esteban,2018-02-01 Plants have been exposed to multiple environmental stressors on long term seasonal and short term daily basis since their appearance on land However the frequency and the intensity of stress events have increased much during the last three decades because of climate change Plants have developed however a multiplicity of modular and highly integrated strategies to cope with challenges imposed by novel usually harsher environments These strategies include migration acclimation and adaptation Twelve articles in this research topic exactly focus on the relative significance of these response mechanisms for the successful acclimation of plants to a wide range of novel environmental pressures Four articles additionally explore how plants respond to severe stress conditions resulting from the concurrent action of multiple stressors Ten articles mostly examine how morpho anatomical physiological and biochemical related traits integrate when plants suffer from novel threats such as solid gaseous and electromagnetic pollutants Suitable physiological indicators for developing conservation strategies are described in the last two works This research topic highlights that bottom up as well as top down approaches will be necessary to develop in near future in the study of plants responses to environmental pressures

Aanwinsten van de Centrale Bibliotheek (Queteletfonds) Bibliothèque centrale (Fonds Quetelet),2004 **Concepts of Capital** Jacek Tittenbrun,2017-07-05 Borrowing terminology from the economic discipline specifically the concept of capital has led to an abundance of new terms in the social sciences human capital social capital and cultural capital to name the most prominent representatives on an ever growing list In this interdisciplinary transaction the concept is borrowed and the original meaning extended until the new concepts often have nothing left in common with their initial referents Here Jacek Tittenbrun offers a critical analysis of human social and cultural capital on the basis of their uses and misuses across a wide range of social sciences simultaneously revealing the source of conceptual diffusion in the real world He presents a two pronged analysis of an intellectual fashion popular in the social sciences and offers a critical analysis of a range of concepts constructed around the common core of capital The analysis is innovative as it is underpinned by a theoretical framework rooted in economic sociology and the concept of ownership in particular The approach is one of the sociology of knowledge coupled with a substantive critique application of the given concepts The volume reveals a range of processes in the real world that account for the conceptual diffusion The general reader will be drawn to the discussion in the second half of the book a study of a variety of relatable real life situations that illuminate privatization and commodification in our lives
