From its inception the U S Department of the Interior has been charged with a conflicting mission One set of statutes demands that the department must develop America s lands that it get our trees water oil and minerals out into the marketplace Yet an opposing set of laws orders us to conserve these same resources to preserve them for the long term and to consider the noncommodity values of our public landscape That dichotomy between rapid exploitation and long term protection demands what I see as the most significant policy departure of my tenure in office the use of science interdisciplinary science as the primary basis for land management decisions For more than a century that has not been the case Instead we have managed this dichotomy by compartmentalizing the American landscape Congress and my predecessors handled resource conflicts by drawing enclosures We ll create a national park here they said and we ll put a wildlife refuge over there Simple enough as far as protection goes And outside those protected areas the message was equally simplistic Y all come and get it Have at it The nature and the pace of the resource extraction was not at issue if you could find it it was yours **The Role of Fire in Nongame Wildlife Management and Community Restoration**, 2002
