Mad Science In Imperial City:

Mad Science in Imperial City Shanxing Wang, 2005 Poetry Prose Asian American Studies MAD SCIENCE IN IMPERIAL CITY is propelled by the personal loss and trauma Shanxing Wang experienced during the political turbulence of the 1980s which culminated in the 1989 tragedy at Tiananmen Square From this personal experience Wang has created a work of art in language which breaks new territories of poetic form The central urgency of Wang's work is a fractured personal and ideological loss mirroring this the work manufactures its own form on the page as a broken narrative Like Dictée by Theresa Hak Kyung Cha Wang's work materializes the shattered effects of cultural history on the mind of the poet who is trying to piece his life together in its devastating and unresolved wake Kristin Prevallet

The Limits of Fabrication Nathan Brown, 2017-01-02 Poetry or poesis has long been understood as a practice of making But how are experiments in the making of poetic forms related to formal making in science and engineering The Limits of Fabrication takes up this question in the context of recent developments in nanoscale materials science investigating concepts and ideologies of form at stake in new approaches to material construction Tracing the direct pertinence of fields crucial to the new materials science nanotechnology biotechnology crystallography and geodesic design in the work of Shanxing Wang Caroline Bergvall Christian Bök and Ronald Johnson back to the midcentury development of Charles Olson's objectist poetics Nathan Brown carves out a tradition of constructivist nonorganic poetics that has developed in conversation with science and engineering While proposing a new approach to the relation of techné craft skill and poesis making forming this book also intervenes in philosophical debates concerning the concept of the object the distinction between organic and inorganic matter theories of self organization and the relation between design and nature Engaging with Heidegger Agamben Whitehead Stiegler and Nancy Brown shows that materials science and materialist poetics offer crucial resources for thinking through the direction of contemporary materialist philosophy

NourbeSe Philip novelists Alfred Jarry and Virginia Woolf comic book writer Grant Morrison and physicists Albert Einstein and Werner Heisenberg The introduction explores why poetry and physics are capable of jointly investigating our

The Believer, Microscopy, Magnification and Modernist Fiction Patrick Armstrong, 2024-12-26 Exploring how modernism registered shock experiences of the microscopic and extended vision in prose fiction through the work of four modernist writers: D. H. Lawrence, Marcel Proust, Virginia Woolf, and Samuel Beckett, this book is the first substantial study of the interrelations between microscopy and modernist fiction. Illustrating ways in which optical instruments had the capacity to change, displace, and reframe ideas of what the world is like, this book argues that encounters with the microscopic are often depicted as thresholds between the human and the non-human in ways that reverberate through modernist fiction. Exploring a period of significant developments in microscopical tools and techniques, from the light microscope to the electron microscope, this book traces a shift that reconfigured the limits of the observable.

Rationalist Empiricism Nathan Brown, 2021-01-05 Honorable Mention Aldo and Jeanne Scaglione Prize for Comparative Literary Studies, Modern Language Association. Twenty-first century philosophy has been drawn into a false opposition between speculation and critique. Nathan Brown shows that the key to overcoming this antinomy is a reengagement with the relation between rationalism and empiricism. If Kant's transcendental philosophy attempted to displace the opposing priorities of those orientations, any speculative critique of Kant will have to re-open and consider anew the conflict and complementarity of reason and experience. *Rationalist Empiricism* shows that the capacity of reason and experience to extend and yet delimit each other has always been at the core of philosophy and science. Coordinating their discrepant powers, Brown argues, is what enables speculation to move forward in concert with critique. Sweeping across ancient, modern, and contemporary philosophy as well as political theory, science, and art, Brown engages with such major thinkers as Plato, Descartes, Hume, Hegel, Marx, Heidegger, Bachelard, Althusser, Badiou, and Meillassoux. He also shows how the concepts he develops illuminate recent projects in the science of measurement and experimental digital photography. With conceptual originality and argumentative precision, *Rationalist Empiricism* reconfigures the history and the future of philosophy, politics, and aesthetics.

The Routledge Handbook of CoFuturisms Taryne Jade Taylor, Isiah Lavender III, Grace L. Dillon, Bodhisattva Chattopadhyay, 2023-10-30 The *Routledge Handbook of CoFuturisms* delivers a new inclusive examination of science fiction from close analyses of single texts to large-scale movements, providing readers with decolonized models of the future, including print, media, race, gender, and social justice. This comprehensive overview of the field explores representations of possible futures arising from non-Western cultures and ethnic histories that disrupt the imperial gaze. In four parts, *The Routledge Handbook of CoFuturisms* considers the look of futures from the margins, foregrounding the issues of Indigenous groups, racial, ethnic, religious, and sexual minorities, and any people whose stakes in the global order of envisioning futures.

are generally constrained due to the mechanics of our contemporary world The book extends current discussions in the area looking at cutting edge developments in the discipline of science fiction and diverse futurisms as a whole Offering a dynamic mix of approaches and expansive perspectives this volume will appeal to academics and researchers seeking to orient their own interventions into broader contexts The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Poetry Project, 2006 The Science of International Law Thomas Alfred Walker, 1893 **Science Fiction** David Seed, 2011-06-23 Science Fiction has proved notoriously difficult to define It has been explained as a combination of romance science and prophecy as a genre based on an imagined alternative to the reader's environment and as a form of fantastic fiction and historical literature It has also been argued that science fiction narratives are the most engaged socially relevant and responsive to the modern technological environment This Very Short Introduction doesn't offer a history of science fiction but instead ties examples of science fiction to different historical moments in order to demonstrate how science fiction has evolved over time David Seed looks not only at literature but also at drama and poetry as well as film Examining recurrent themes in science fiction he looks at voyages into space the concept of the alien and alternative social identities the role of technology in science fiction and its relation to time in the past present and future ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable World Literature Today, 2007

New Imperial Series, 1889 **The Saturday Review of Politics, Literature, Science and Art**, 1877 *In the Images of Development* Tridib Banerjee, 2021-06-08 The urban legacy of the Global South since the colonial era and how sustainable development and environmental and social justice can be achieved Remarkably little of the expansive literature on development and globalization considers actual urban form and the physical design of cities as outcomes of these phenomena

The development that has shaped historic transformations in urban form and urbanism and the consequent human experiences remains largely unexplored. In this book Tridib Banerjee fills this void by linking the idea of development with those of urbanism, urban form and urban design, focusing primarily on the contemporary cities in the developing world, the Global South and their intrinsic prospects in city design. Further, he examines the endogenous possibilities for the future design of these cities that may address growing inequality and the environmental crisis. Banerjee deftly traces the urban legacy of the Global South from the beginning of the colonial era, closely examining the economic, political and ideological forces that influenced colonial and postcolonial development, drawing from relevant experiences of different cities in the developing world and discussing the arguments for the historic parity of these cities with their Western counterparts. Finally, Banerjee considers essential notions of future city design that are grounded in the critical challenges of sustainable development, equity, environmental and social justice, and diversity, and how such outcomes can be achieved. This book serves as the opening of a long overdue conversation among design, development and planning scholars and practitioners and those interested in the urban development of the Global South.
