Drawings after the "Codices Madrid" of Leonardo da Vinci Joseph Beuys, Ann Temkin, 1998

The Science of Leonardo Fritjof Capra, 2008-12-02

Leonardo da Vinci's scientific explorations were virtually unknown during his lifetime despite their extraordinarily wide range. He studied the flight patterns of birds to create some of the first human flying machines, designed military weapons and defenses, studied optics, hydraulics, and the workings of the human circulatory system, and created designs for rebuilding Milan employing principles still used by city planners today. Perhaps most importantly, Leonardo pioneered an empirical, systematic approach to the observation of nature, what is known today as the scientific method. Drawing on over 6,000 pages of Leonardo's surviving notebooks, acclaimed scientist and bestselling author Fritjof Capra reveals Leonardo's artistic approach to scientific knowledge and his organic and ecological worldview. In this fascinating portrait of a thinker centuries ahead of his time, Leonardo singularly emerges as the unacknowledged father of modern science. From the Trade Paperback edition.

Leonardo da Vinci's Giant Crossbow Matt Landrus, 2010-06-14

Although Leonardo's Giant Crossbow is one of his most popular drawings, it has been one of the least understood. Leonardo's Giant Crossbow offers the first in-depth account of this drawing's likely purpose and its highly resolved design. This fascinating book has a wealth of technical information about the Giant Crossbow drawing as it is a complete study of this project, though this is as accessible to the general audience as much as it is also informative with new discoveries for the professors of engineering, technology, and art. The book explores the context of Leonardo's invention with an examination of the extensive documentary evidence, a short history of the great crossbow and ballista, the first accurate translation of the text, and the technical specifications, and a detailed analysis of Leonardo's design process for the crossbow from start to finish. Dozens of preparatory drawings, along with the recent discovery of nearly invisible metal stylus preparatory incisions under the ink of the Giant Crossbow drawing, are evidence of Leonardo's intent to offer engineers and other viewers a thorough design of the massive machine. The book proposes these new discoveries with the help of a strategy that had been at the core of Leonardo's working philosophy: the proportional method. As proven with an analysis of the Giant Crossbow project, he used a consistent approach to 1/3rd proportions throughout the design and drawing process and employed this kind of proportional strategy at the start of almost every important project. Thanks to this proof of his knowledge of geometry, evidence of his studies of impetus and force, and thanks to the highly polished and complex nature of the Giant Crossbow design, a later date for the drawing is proposed in the present book, associating the drawing with his drafting capabilities around 1490-93.
