Lasers, Clocks and Drag-Free Control Hansjörg Dittus, Claus Lämmerzahl, Slava G. Turyshev, 2009-09-02 Over the next decade the gravitational physics community will benefit from dramatic improvements in many technologies critical to testing gravity Highly accurate deep space navigation interplanetary laser communication interferometry and metrology high precision frequency standards precise pointing and attitude control together with drag free technologies will revolutionize the field of experimental gravitational physics The centennial of the general theory of relativity in 2015 will motivate a significant number of experiments designed to test this theory with unprecedented accuracy The purpose of the contributions in this book written by international experts is to explore the possibilities for the next 20 years for conducting gravitational experiments in space that would utilize both entirely new and highly improved existing capabilities **Latin as the**

Language of Science and Learning Philipp Roelli, 2021-11-22 This book investigates the role of the Latin language as a vehicle for science and learning from several angles First the question what was understood as science through time and how it is named in different languages especially the Classical ones is approached Criteria for what did pass as scientific are found that point to science as a kind of Greek *Denkstil* based on pattern finding and their unbiased checking In a second part a brief diachronic panorama introduces schools of thought and authors who wrote in Latin from antiquity to the present Latin's heydays in this function are clearly the time between the twelfth and eighteenth centuries Some niches where it was used longer are examined and reasons sought why Latin finally lost this lead role A third part seeks to define the peculiar characteristics of scientific Latin using corpus linguistic approaches As a result several types of scientific writing can be identified The question of how to transfer science from one linguistic medium to another is never far Latin inherited this role from Greek and is in turn the ancestor of science done in the modern vernaculars At the end of the study the importance of Latin science for modern science in English becomes evident **Por Siempre Tuya** Lara Soultaker, Alania Wilson es una

del Universo P.D. Ouspensky,1969 *A History of Magic and Experimental Science: The seventeenth century* Lynn Thorndike,1958 A history of science and magic spanning the period from early Christianity through early modern Europe to the end of the 17th century Jesuit Science and the End of Nature's Secrets Mark A. Waddell,2016-03-09 Jesuit Science and the End of Nature's Secrets explores how several prominent Jesuit naturalists including Niccol Cabeo Athanasius Kircher and Gaspar Schott tackled the problem of occult or insensible causation in the seventeenth century The search for hidden causes lay at the heart of the early modern study of nature and included phenomena such as the activity of the magnet the marvelous powers ascribed to certain animals and plants and the hidden destructive forces churning in the depths of the Earth While this was a project embraced by most early modern naturalists however the book demonstrates that the Jesuits were uniquely suited to the study of nature's hidden secrets because of the complex methods of contemplation and meditation enshrined at the core of their spirituality Divided into six chapters the work documents how particular Jesuits sought to reveal and expose nature's myriad secrets through an innovative blending of technology imagery and experiment Moving beyond the conventional Aristotelianism mandated by the Society of Jesus they set forth a vision of the world that made manifest the works of God as Creator no matter how deeply hidden those works were The book thus not only presents a narrative that challenges present day assumptions about the role played by Catholic religious communities in the formation of modern science but also captures the exuberance and inventiveness of the early modern study of nature **A History of Magic and Experimental Science: & 8. The seventeenth century** Lynn Thorndike,1958 **Cooperative Design, Visualization, and Engineering** Yuhua Luo,2007-09-04 This book constitutes the refereed proceedings of the 4th International Conference on Cooperative Design Visualization and Engineering CDVE 2007 held in Shanghai China in September 2007 The papers presented were carefully reviewed from numerous submissions The papers cover all current issues in cooperative design visualization and engineering ranging from theoretical and methodological topics to various systems and frameworks to applications in a variety of fields Thinking with Demons Stuart Clark,1999 This is a work of fundamental importance for our understanding of the intellectual and cultural history of early modern Europe Stuart Clark offers a new interpretation of the witchcraft beliefs of European intellectuals based on their publications in the field of demonology and shows how these beliefs fitted rationally with many other views current in Europe between the fifteenth and eighteenth centuries Professor Clark is the first to explore the appeal of demonology to early modern intellectuals by looking at the books they published on the subject during this period After examining the linguistic foundations of their writings the author shows how the writers' ideas about witchcraft and about magic complemented their other intellectual commitments in particular their conceptions of nature history religion and politics The result is much more than a history of demonology It is a survey of wider intellectual and ideological purposes and underlines just how far the nature of rationality is dependent on its historical context **Francis Bacon on Motion and Power** Guido Giglioni,James A.T.
