Clarke, Peter Bøgh Andersen, Ronald K. Stamper, 2012-12-06 Coordination And Communication Using Signs Studies in Organisational Semiotics is a cutting edge volume that bridges the gap between the technical and social aspects of information systems and information technology The chapters in the book are divided into two major sections The first section deals with Communication and Pragmatics and Organisational Systems and the following topics are examined the semiotic framework and natural language coordination and communication using natural language and other artifacts in a real life setting substantive level issues of information systems and business processes from several theoretical perspectives language as action communication quality in the context of systems and business processes organisational action and Greimas semiotics Section Two concentrates on organisational systems which may or may not include a computer system as a component and examines the following topics semiotic strategies and semiotic models of organisational structures the impact of information technology with instructive case studies the impact of information technology with a particular focus on sense making in the work floor context the design of computer information systems improving the design quality of agent based information systems the design of information systems in terms of capacity and data scheme All the chapters in the volume have been submitted to a review process of discussants and peer reviews Cumulated Index Medicus ,1989

History of Computing: Learning from the Past Arthur Tatnall, 2010-08-06 History of Computing Learning from the Past Why is the history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn't history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010

A Model of Freshman Use of Microcomputers Related to Intellectual and Social Development Daniel Richards Judd, 2002-08-06 The purpose of this study was to determine the relationship between freshmen's use of microcomputers and their social and intellectual development in a university environment A review of related literature describes the theoretical foundation of this research and identifies questionnaire items for measuring the critical variables of microcomputer use and student development To conduct the study data obtained from 400 freshman students prior to entering Utah State University USU in the fall of 1996 were compared to data collected from the same students during Spring Quarter of 1997 Correlational analysis was used to study changes in freshman students use of microcomputers and variables known to predict students social and academic integration into the institution Regression analyses were used to identify variables and dimensions of microcomputer use that contributed to and detracted from students intellectual and social development 268 pages

Electronic Discourse Boyd H. Davis, Jeutonne Brewer, Jeutonne Patten Brewer, 1997-01-01 Investigates the new world of computer conferencing and details how writers use language when their social interaction is exclusively enacted through text on screens Education is Not Rocket Science David B. Zandvliet, 2006-01-01 The dominance of computer labs in our schools is the result of a long struggle among teachers and technicians for control of precious computer resources As technicians gain power and influence this is expressed in the row on row of machines installed in literally thousands of computer labs in schools around the world While labs are in some ways ideal for learning about technology or computer programming they somehow seem ill equipped to assist teachers with a lesson on language arts geography or for helping students conduct a scientific experiment As a result the huge investment in computers seems like so much wasted potential labs are not influencing teaching in the ways we had hoped for and in fact their use may even be harmful to students These

observations are based on five years of experience as the director of a centre for educational technology at a leading Canadian university and on the results of three international studies I conducted in Australia Canada and Malaysia A reversal of the current techno trend would mean teachers would reclaim computers for their own classrooms and relegate the idea of the computer lab to the scrap heap of history As educators we need to discard the once size fits all strategy which computer labs imply about teachers instructional needs This is reinforced by the apparent failure of computers to transform teachers practice despite significant investments in computer technologies Some critics describe this as a management problem as computer labs reinforce top down ways of thinking about knowledge Unfortunately once such models are adopted undesirable uses of technology such as the computer lab become entrenched in a bureaucratic mindset limiting the effectiveness of these expensive tools to support teaching and learning

Using a Microcomputer in the Classroom Gary G. Bitter, Ruth A. Camuse, Vicki L. Durbin, 1993 Addressing the role of computers in learning and the means of integrating and applying computer technology into the curriculum this text emphasizes all the important basic topics related to technology in education There is coverage of multimedia hypermedia designing lesson plans and how to evaluate and choose software all supported by numerous forms and charts

Managing Social and Economic Change with Information Technology Information Resources Management Association. International Conference, 1994-01-01 Many experts believe that through the utilization of information technology organizations can better manage social and economic change This book investigates the challenges involved in the use of information technologies in managing these changes
