Resolution Burning:

Biomass Burning and Its Inter-Relationships with the Climate System John L. Innes, Martin Beniston, Michel M. Verstraete, 2006-04-11 JOHN L INNES University of British Columbia Vancouver Canada The interactions between biomass burning and climate have been brought into focus by a number of recent events Firstly the Framework Convention on Climate Change and more recently the Kyoto Protocol have drawn the attention of policy makers and others to the importance of biomass burning in relation to atmospheric carbon dioxide concentrations Secondly the use of prescribed fires has become a major management tool in some countries with for example the area with fuel treatments which include prescribed burns and mechanical treatments having increased on US National Forest System lands from 123 000 ha in 1985 to 677 000 ha in 1998 Thirdly large numbers of forest fires in Indonesia Brazil Australia and elsewhere in 1997 and 1998 received unprecedented media attention Consequently it is appropriate that one of the Wengen Workshops on Global Change Research be devoted to the relationships between biomass burning and climate This volume includes many of the papers presented at the workshop but is also intended to act as a contribution to the state of knowledge on the int relationships between biomass burning and climate change Previous volumes on biomass burning e g Goldammer 1990 Levine 1991a Crutzen and Goldammer 1993 Levine 1996a 1996b Van Wilgen et al 1997 have stressed various aspects of the biomass climate issue and provide a history of the development of our understanding of the many complex relationships that are involved

Air Pollution Modeling and Its Application XIX Carlos Borrego, Ana Isabel Miranda, 2008-07-22 In 1969 the North Atlantic Treaty Organization NATO established the Committee on Challenges of Modern Society CCMS The subject of air pollution was from the start one of the priority problems under study within the framework of various pilot studies undertaken by this committee The organization of a periodic conference dealing with air pollution modelling and its application has become one of the main activities within the pilot study relating to air pollution The first five international conferences were organized by the United States as the pilot country the second five by the Federal Republic of Germany the third five by Belgium the fourth four by The Netherlands the next five by Denmark and the last five by Portugal This volume contains the abstracts of papers and posters presented at the 29th NATO CCMS International Technical Meeting on Air

Pollution Modelling and Its Application held in Aveiro Portugal during September 24-28 2007 This ITM was organized by the University of Aveiro Portugal Pilot Country and Host Organization The key topics distinguished at this ITM included Local and urban scale modelling Regional and intercontinental modelling Data assimilation and air quality forecasting Model assessment and verification Aerosols in the atmosphere Interactions between climate change and air quality Air quality and human health **Fire Management Notes**, 1999 **Wildland Fire Smoke in the United States** David L.

Peterson, Sarah M. McCaffrey, Toral Patel-Weynand, 2022-08-11 This open access book synthesizes current information on wildland fire smoke in the United States providing a scientific foundation for addressing the production of smoke from wildland fires This will be increasingly critical as smoke exposure and degraded air quality are expected to increase in extent and severity in a warmer climate Accurate smoke information is a foundation for helping individuals and communities to effectively mitigate potential smoke impacts from wildfires and prescribed fires The book documents our current understanding of smoke science for 1 primary physical chemical and biological issues related to wildfire and prescribed fire 2 key social issues including human health and economic impacts and 3 current and anticipated management and regulatory issues Each chapter provides a summary of priorities for future research that provide a roadmap for developing scientific information that can improve smoke and fire management over the next decade **Landscape Fire, Smoke, and Health**

Tatiana V. Loboda, Nancy H. F. French, Robin C. Puett, 2023-10-17 A transdisciplinary approach to investigating relationships between biomass burning and human health outcomes Where and when wildfires occur what pollutants they emit how the chemistry of smoke changes in the atmosphere and what impact this air pollution has on human health and well being are questions explored across different scientific disciplines Landscape Fire Smoke and Health Linking Biomass Burning Emissions to Human Well Being is designed to create a foundational knowledge base allowing interdisciplinary teams to interact more effectively in addressing the impacts of air pollution from biomass burning on human health Volume highlights include Core concepts principles and terminology related to smoke and air quality used in different disciplines Observational and modeling tools and approaches in fire science Methods to sense model and map smoke in the atmosphere Impacts of biomass burning smoke on the health and well being of children and adults Perspectives from researchers modelers and practitioners Case studies from different countries Information to support decision making and policy The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals **Global and Regional**

Vegetation Fire Monitoring from Space Frank J. Ahern, Johann Georg Goldammer, Christopher O. Justice, 2001

Introduction Increasing conflagrations of forests and other lands throughout the world during the 1980s and 1990s have made fires in forest and other vegetation emerge as an important global concern Both the number and severity of wildfires accidental fires and the application of fire for land use change seem to have increased dramatically compared to previous

decades of the twentieth century The adverse consequences of extensive wildfires cross national boundaries and have global impacts Fire regimes are changing with climate variability and population dynamics Satellite remote sensing technology has the potential to play an important role for monitoring fires and their consequences as well as in operational fire management In response to this need as well as to respond to other needs for more rapid progress in forest observation in 1997 the Committee on Earth Observation Satellites CEOS initiated Global Observation of Forest Cover GOFC as an international pilot project to test the concepts of an Integrated Global Observing System The GOFC program is currently part of the Global Terrestrial Observing System GTOS GOFC was designed to bring together data providers and information users to make information products from satellite and in situ observations of forests more readily available worldwide Fire Monitoring and Mapping was formed as one of three basic components of GOFC This book contains eighteen contributions authored by scientists who represent the most active international research and development institutions aiming at coordinating and improving international efforts for user oriented systems and products These papers were initially presented at a GOFC Fire Workshop held at the Joint Research Centre Ispra The volume is a contribution of the GOFC Forest Fire Monitoring and Mapping Implementation Team to the Interagency Task Force Working Group Wildland Fire of the UN International Strategy for Disaster Reduction ISDR

Fire Whirls Form Brook Clearwater, AI, 2025-02-27 Fire Whirls Form explores the science behind fire whirls those terrifying yet mesmerizing fiery vortices that are becoming increasingly common due to escalating wildfires These fire tornadoes arise from a complex interplay of heat and wind and understanding their formation is crucial for scientists firefighters and communities in wildfire prone areas The book argues that despite their seemingly chaotic nature fire whirls follow discernible patterns offering insights into improved prediction and mitigation strategies For instance specific atmospheric instabilities such as temperature gradients and wind shear contribute significantly to their development The book progresses logically beginning with fundamental concepts of fire dynamics and atmospheric science It then delves into meteorological conditions and modeling techniques examining the capabilities and limitations of current computational fluid dynamics CFD models Case studies of significant fire whirl events like those seen in the Horse River Fire and the Carr Fire illustrate the principles discussed A key focus is how this knowledge can inform wildfire management from strategic firebreak placement to fuel management practices like prescribed burns ultimately connecting environmental science with practical firefighting
