While enormous progress has been made towards sustainability, the scope and opportunities for improvements are significant. To further the effort for sustainable development, a conference on Sustainable Construction Materials and Technologies was held at Coventry University, Coventry, U.K. from June 11th-13th 2007 to highlight case studies and research on new and innovative ways of achieving sustainability of construction materials and technologies. Over 190 papers from over 45 countries were accepted for presentation at the conference, of which approximately 100 selected papers are published in this book. The rest of the papers are published in two supplementary books. Topics covered in this book include sustainable alternatives to natural sand, stone and Portland cement in concrete; sustainable use of recyclable resources such as fly ash, ground municipal waste slag, pozzolan, rice husk ash, silica fume, gypsum, plasterboard, drywall and lime in construction; sustainable mortar, concrete bricks, blocks and backfill; the economics and environmental impact of sustainable materials and structures; use of construction and demolition wastes and organic materials; straw bale, hemp, etc. in construction; sustainable use of soil, timber and wood products and related sustainable construction and rehabilitation technologies. Rose, 2019-02-26 A comprehensive handbook covering all aspects of the Atlantic cod, including the biology, ecology, life histories, behaviour, commercial exploitation and conservation. Not only is Atlantic cod one of the most valuable food fish in the world's oceans, it is an important component of North Atlantic ecosystems and has been subject to much research into its biology, ecology and exploitation. After hundreds of years of exploitation, overfishing in the last half of the 20th Century caused many stocks to collapse, most famously the Northern cod stock off Newfoundland and Labrador, Canada. Since then, most cod stocks have been better researched and managed but remain in a variety of states, from fully recovered to continued decline. This book, written by world experts, describes that research and management and the importance of cod and its fisheries on North Atlantic cultures and economies, with impacts well beyond the range of the species. *Atlantic Cod: Bio Ecology of the Fish* offers insightful chapter coverage of cod nomenclature, taxonomy, phylogeny and morphology, physiology and ecophysiology, reproduction and spawning behavior, early life history and pre-recruitment processes, migrations, movements and stock identity, feeding, growth and energetics, the place of cod in the ecosystem, the exploitation of cod through history and present-day commercial fisheries and precautionary management for sustainable fisheries, impacts of climate change on cod biology.
