Frederick G. Kilgour,1998-04-23 Distinguished scholar and library systems innovator Frederick Kilgour tells a five thousand  
year story in this exciting work a tale beginning with the invention of writing and concluding with the emerging electronic  
book Calling on a lifetime of interest in the growth of information technology Kilgour brings a fresh approach to the history of  
the book emphasizing in rich authoritative detail the successive technological advances that allowed the book to keep pace  
with ever increasing needs for information Borrowing a concept from evolutionary theory the notion of punctuated equilibria  
to structure his account Kilgour investigates the book s three discrete historical forms the clay tablet papyrus roll and codex  
before turning to a fourth still evolving form the cyber book a version promising swift electronic delivery of information in  
text sound and motion to anyone at any time The clay tablet initially employed as a content descriptor for sacks of grain  
proved inadequate to the growing need for commercial and administrative records Its successor the papyrus roll was itself  
succeeded by the codex a format whose superior utility and information capacity led to sweeping changes in the management  
of accumulated knowledge the pursuit of learning and the promulgation of religion Kilgour throughout considers closely both  
technological change and the role this change played in cultural transformation His fascinating account of the modern book  
from Gutenberg s invention of cast type printing five hundred years ago to the arrival of books displayed on a computer  
screen spotlights the inventors engineers and entrepreneurs who in creating the machinery of production and dissemination  
enabled the book to maintain its unique cultural power over time Deft provocative and accessibly written *The Evolution of the*
