The Oxford Handbook of Empirical Aesthetics Marcos Nadal, Oshin Vartanian, 2022-09-22 Humans have engaged in artistic and aesthetic activities since the appearance of our species Our ancestors have decorated their bodies tools and utensils for over 100 000 years The expression of meaning using color line sound rhythm or movement among other means constitutes a fundamental aspect of our species biological and cultural heritage Art and aesthetics therefore contribute to our species identity and distinguish it from its living and extinct relatives Science is faced with the challenge of explaining the natural foundations of such a unique

trait and the way cultural processes nurture it into magnificent expressions historically and ethnically unique How do the human mind and brain bring about these sorts of behaviors What psychological and neural processes underlie the appreciation of painting music and dance How does training modulate these processes Are humans the only species capable of aesthetic appreciation or are other species endowed with the rudiments of this capacity Empirical examinations of such questions have a long and rich history in the discipline of psychology the genesis of which can be traced back to the publication of Gustav Theodor Fechner's *Vorschule der Aesthetik* in 1876 making it the second oldest branch in experimental psychology The *Oxford Handbook of Empirical Aesthetics* brings together leading experts in psychology neuroimaging art history and philosophy to answer these questions It provides the most comprehensive coverage of the domain of empirical aesthetics to date With sections on visual art dance music and many other art forms and aesthetic phenomena the breadth of this volume's scope reflects the richness and variety of topics and methods currently used today by scientists to understand the way our mind and brain endow us with the faculty to produce and appreciate art and aesthetics
