International Who's who Hyacinthe Ringrose, 1910 A biographical dictionary of the world's notable living men and women

The International Blue Book, 1910 The Mathematics of Paul Erdős I Ronald L. Graham, Jaroslav Nešetřil, Steve Butler, 2013-08-04 This is the most comprehensive survey of the mathematical life of the legendary Paul Erdős 1913-1996 one of the most versatile and prolific mathematicians of our time For the first time all the main areas of Erdős's research are covered in a single project Because of overwhelming response from the mathematical community the project now occupies over 1000 pages arranged into two volumes These volumes contain both high level research articles as well as key articles that survey some of the cornerstones of Erdős's work each written by a leading world specialist in the field A special chapter Early Days rare photographs and art related to Erdős complement this striking collection A unique contribution is the bibliography on Erdős's publications the most comprehensive ever published This new edition dedicated to the 100th anniversary of Paul Erdős's birth contains updates on many of the articles from the two volumes of the first edition several new articles from prominent mathematicians a new introduction more biographical information about Paul Erdős and an updated list of publications The first volume contains the unique chapter Early Days which features personal memories of Paul Erdős by a number of his colleagues The other three chapters cover number theory random methods and geometry All of these chapters are essentially updated most notably the geometry chapter that covers the recent solution of the problem on the number of distinct distances in finite planar sets which was the most popular of Erdős's favorite geometry problems A Panorama of Number Theory Or The View from Baker's Garden Gisbert Wüstholtz, 2002-09-26 This is a selection of high quality articles on number theory by leading figures **Beyond Quasicrystals** Francoise Axel, Denis Gratias, 2013-06-29 This book is the collection of most of the written versions of the Courses given at the Winter School Beyond Quasicrystals in Les Houches March 7-18 1994 The School gathered lecturers and participants from all over the world and was prepared in the spirit of a general effort to promote theoretical and experimental interdisciplinary communication between mathematicians theoretical and experimental physicists on the topic of the nature of geometric order in solids beyond standard periodicity and quasi periodicity The overall structure of the book reflects the wish of the editors to pose this fundamental question of geometric order in solids from both the experimental and theoretical point of view The first part is devoted more specifically to quasicrystals These materials were the common starting point of most of the audience and present a first concrete example of a non trivial geometric order We chose to focus on a few fundamental aspects of quasicrystals related to hidden symmetries in solids which are not easily found in standard textbooks on the topic not to reach an exhaustive survey which is already available elsewhere **Automatic Sequences** Jean-Paul Allouche, Jeffrey Shallit, 2003-07-21 Uniting dozens of seemingly disparate results from different fields this book combines concepts from mathematics and computer science to present the first integrated treatment of sequences generated by finite automata The authors apply the theory to the study of automatic sequences and their generalizations such as Sturmian words and k -regular

sequences And further they provide applications to number theory particularly to formal power series and transcendence in finite characteristic physics computer graphics and music Starting from first principles wherever feasible basic results from combinatorics on words numeration systems and models of computation are discussed Thus this book is suitable for graduate students or advanced undergraduates as well as for mature researchers wishing to know more about this fascinating subject Results are presented from first principles wherever feasible and the book is supplemented by a collection of 460 exercises 85 open problems and over 1600 citations to the literature

On the Correlation of Multiplicative and the Sum of Additive Arithmetic Functions Peter D. T. A. Elliott,1994 The correlation of multiplicative arithmetic functions on distinct arithmetic progressions and with values in the complex unit disc cannot be continually near to its possible maximum unless each function is either very close to or very far from a generalized character Moreover under accessible condition the second possibility can be ruled out As a consequence analogs of the standard limit theorems in probabilistic number theory are obtained with the classical single additive function on the integers replaced by a sum of two additive functions on distinct arithmetic progressions

Sapiential, Liturgical and Poetical Texts from Qumran Daniel K. Falk,Florentino García Martínez,Eileen Schuller,2018-12-24 At the third meeting of the International Organisation for Qumran Studies held in Oslo in 1998 a variety of papers were presented concerning the study of the Sapiential Liturgical and Poetical Texts from Qumran The fourteen papers selected for this volume are arranged in three sections Sapiential Texts contains four studies on different wisdom texts from Cave 4 Liturgical and Poetical Texts is formed by seven papers dealing with independent poetic or liturgical compositions while Qumran Wisdom and the New Testament presents three papers that explore the relationship of wisdom materials found at Qumran and some passages of the New Testament The volume is published in memory of Maurice Baillet who passed away shortly before the meeting It contains a biographical sketch and his complete bibliography provided by Emile Puech

My Mathematical Universe: People, Personalities, And The Profession Krishnaswami Alladi,2022-11-15 This is an autobiography and an exposition on the contributions and personalities of many of the leading researchers in mathematics and physics with whom Dr Krishna Alladi Professor of Mathematics at the University of Florida has had personal interaction with for over six decades Discussions of various aspects of the physics and mathematics academic professions are included Part I begins with the author s unusual and frequent introductions as a young boy to scientific luminaries like Nobel Laureates Niels Bohr Murray Gell Mann and Richard Feynman in the company of his father the scientist Alladi Ramakrishnan Also in Part I is an exciting account of how the author started his research investigations in number theory as an undergraduate and how contact and collaboration with the great Paul Erd s as a student influenced him in his career In depth views of the Institute for Advanced Study Princeton and several major American Universities are given and fascinating descriptions of the work and personalities of some Field Medalists and eminent mathematicians are provided Part II deals with the author s tenure at the University of Florida where he initiated several programs as Mathematics Chair

for a decade and how he has served the profession in various capacities most notably as Chair of the SASTRA Ramanujan Prize Committee and Editor in Chief of The Ramanujan Journal The book would appeal to academicians and the general public since the author has blended academic and scientific discussions at a non technical level with descriptions of destinations in his international travels for work and pleasure The reader is invited to dig as deep as desired and is guaranteed to be treated to whimsical stories and personal peeks at some of the great luminaries of the twentieth and twenty first centuries
