Warner,1993-07-07 This text brings the reader to the frontiers of current research in topological rings The exercises illustrate many results and theorems while a comprehensive bibliography is also included The book is aimed at those readers acquainted with some very basic point set topology and algebra as normally presented in semester courses at the beginning graduate level or even at the advanced undergraduate level Familiarity with Hausdorff metric compact and locally compact spaces and basic properties of continuous functions also with groups rings fields vector spaces and modules and with Zorn s Lemma is also expected      Numerical Solution of Partial Differential Equations—III, SYNSPADE 1975 Bert Hubbard,2014-05-10 Numerical Solution of Partial Differential Equations III Synspade 1975 provides information pertinent to those difficult problems in partial differential equations exhibiting some type of singular behavior This book covers a variety of topics including the mathematical models and their relation to experiment as well as the behavior of solutions of the partial differential equations involved Organized into 16 chapters this book begins

with an overview of elastodynamic results for stress intensity factors of a bifurcating crack This text then discusses the effects of nonlinearities such as bifurcation which occur in problems of nonlinear mechanics Other chapters consider the equations of changing type and those with rapidly oscillating coefficients This book discusses as well the effective computational methods for numerical solutions The final chapter deals with the principal results on G convergence such as the convergence of the Green's operators for Dirichlet's and other boundary problems This book is a valuable resource for engineers and mathematicians

**An Idiot's Fugitive Essays on Science** C. Truesdell, 2012-12-06 When after the agreeable fatigues of solicitation Mrs Millamant set out a long bill of conditions subject to which she might by degrees dwindle into a wife Mirabell offered in return the condition that he might not thereby be beyond measure enlarged into a husband With age and experience in research come the twin dangers of dwindling into a philosopher of science while being enlarged into a dotard The philosophy of science I believe should not be the preserve of senile scientists and of teachers of philosophy who have themselves never so much as understood the contents of a textbook of theoretical physics let alone done a bit of mathematical research or even enjoyed the confidence of a creating scientist On the latter count I run no risk Any reader will see that I am untrained though not altogether unread in classroom philosophy Of no ignorance of mine do I boast indeed I regret it but neither do I find this one ignorance fatal here for few indeed of the great philosophers to explicate whose works hodiernal professors of philosophy destroy forests of pulp were themselves so broadly and specially trained as are their scholiasts In attempt to palliate the former count I have chosen to collect works written over the past thirty years some of them not published before and I include only a few very recent essays

Positive Operators and Fixed-Point Theorems with Applications S. A. Mohiuddine, Anupam Das, Dragan S. Djordjević, 2025-05-29 This book presents original research on the theory of positive operators alongside fixed point theorems and their diverse applications It introduces various positive operators and explores their approximation properties including Korovkin type theorems Voronovskaja type

results convergence rate and other related findings Additionally the book addresses the existence of solutions for various differential and integral equations in different Banach spaces by using Darbo type fixed point theorems This book also presents an interplay between positive operators and fixed point theory Each chapter is self contained addressing a current problem and outlining solutions and potential applications The chapters provide sufficient background to ensure that new definitions and results can be understood independently

Mathematical Structures of Ergodicity and Chaos in Population Dynamics Paweł J. Mitkowski, 2020-09-19 This book concerns issues related to biomathematics medicine or cybernetics as practiced by engineers Considered population dynamics models are still in the interest of researchers and even this interest is increasing especially now in the time of SARS CoV 2 coronavirus pandemic when models are intensively studied in order to help predict its behaviour within human population The structures of population dynamics models and practical methods of finding their solutions are discussed Finally the hypothesis of the existence of non trivial ergodic properties of the model of erythropoietic response dynamics formulated by A Lasota in the form of delay differential equation with unimodal feedback is analysed The research can be compared with actual medical data as well as shows that the structures of population models can reflect the dynamic structures of reality

*Almost Periodicity and Almost Automorphy* Abdallah Afoukal, Brahim Es-sebbar, Khalil Ezzinbi, Gaston Mandata N'Guérékata, 2025-03-03 When we study differential equations in Banach spaces whose coefficients are linear unbounded operators we feel that we are working in ordinary differential equations however the fact that the operator coefficients are unbounded makes things quite different from what is known in the classical case Examples or applications for such equations are naturally found in the theory of partial differential equations More specifically if we give importance to the time variable at the expense of the spatial variables we obtain an ordinary differential equation with respect to the variable which was put in evidence Thus for example the heat or the wave equation gives rise to ordinary differential equations of this kind Adding boundary conditions can often be translated in terms of considering solutions in some convenient functional Banach space The theory of semigroups of operators provides an elegant approach to study this kind of systems Therefore we can frequently guess or even prove theorems on differential equations in Banach spaces looking at a corresponding pattern in finite dimensional ordinary differential equations

Cea, D. Chenais, Giuseppe Geymonat, J.L. Lions, 2012-12-06 Pierre Grisvard one of the most distinguished French mathematicians died on April 22 1994 A Conference was held in November 1994 out of which grew the invited articles contained in this volume All of the papers are related to functional analysis applied to partial differential equations which was Grisvard's specialty Indeed his knowledge of this area was extremely broad He began his career as one of the very first students of Jacques Louis Lions and in 1965 he presented

his State Thesis on interpolation spaces using in particular spectral theory for linear operators in Banach spaces After 1970 he became a specialist in the study of optimal regularity for partial differential equations with boundary conditions He studied singularities coming from coefficients boundary conditions and mainly non smooth domains and left a legacy of precise results which have been published in journals and books Pierre Grisvard spent most of his career as a full professor at the University of Nice where he started in 1967 For shorter or longer periods he visited several foreign countries and collaborated with some of the most famous mathematicians in his field He was also an excellent organizer and directed a large number of Ph D students Finally this volume contains a bibliography of Grisvard's works as well as one paper which he wrote and which has not been published before

*Positivity in Arakelov Geometry over Adelic Curves* Huayi Chen, Atsushi Moriwaki, 2024-08-21 This monograph presents new research on Arakelov geometry over adelic curves a novel theory of arithmetic geometry developed by the authors It explores positivity conditions and establishes the Hilbert Samuel formula and the equidistribution theorem in the context of adelic curves Connections with several classical topics in Arakelov geometry and Diophantine geometry are highlighted such as the arithmetic Hilbert Samuel formula positivity of line bundles equidistribution of small subvarieties and theorems resembling the Bogomolov conjecture Detailed proofs and explanations are provided to ensure the text is accessible to both graduate students and experienced researchers
