Sense Of Justice Biological Foundations Of Law:

The Sense of Justice Roger Masters, Margaret Gruter, 1992-03-10 This book introduces the reader to the social and behavioural foundations for a sense of justice the form of equilibrium which individuals and legal systems seek to achieve and maintain in a changing and complex world The contributors draw upon new discoveries and insights from the biologically based behavioural sciences that are critical to a more informed understanding of legal phenomena particularly those dealing with complex social and political relationships **The Sense of Justice**, 1992 **Cognition of the Law** Luigi

Cominelli, 2018-07-04 This book's basic hypothesis which it proposes to test with a cognitive sociological approach is that legal behavior like every form of human behavior is directed and framed by biosocial constraints that are neither entirely genetic nor exclusively cultural As such from a sociological perspective the law can be seen as a super meme that is as a biosocial constraint that develops only in complex societies This super meme theory by highlighting a fundamental distinction between defensive and assertive biases might explain the false contradiction between law as a static and historical phenomenon and law as a dynamic and promotional element Socio legal scholars today have to face the challenge of pursuing a truly interdisciplinary approach connecting all the fields that can contribute to building a modern theory of normative behavior and social action Understanding and framing concepts such as rationality emotion or justice can help to overcome the significant divide between micro and macro sociological knowledge Social scientists who are interested in the law must be able to master the epistemological discourses of different disciplines and to produce fruitful syntheses and bridge operations so as to understand the legal phenomenon from each different point of view The book adopts four perspectives sociological psychological biological evolutionary and cognitive All of them have the potential to be mutually integrated and constitute that general social science that provides common ground for exchange The goal is to arrive at a broad and integrated view of the socio legal phenomenon paving the way for a comprehensive theory of norm oriented and norm perceived actions Darwinian Natural Right Larry Arnhart, 1998-04-02 This book shows how Darwinian biology

supports an Aristotelian view of ethics as rooted in human nature Defending a conception of Darwinian natural right based on the claim that the good is the desirable the author argues that there are at least twenty natural desires that are universal to all human societies because they are based in human biology The satisfaction of these natural desires constitutes a universal standard for judging social practice as either fulfilling or frustrating human nature although prudence is required in judging what is best for particular circumstances The author studies the familial bonding of parents and children and the conjugal bonding of men and women as illustrating social behavior that conforms to Darwinian natural right He also studies slavery and psychopathy as illustrating social behavior that contradicts Darwinian natural right He argues as well that the natural moral sense does not require religious belief although such belief can sometimes reinforce the dictates of nature

Readings in Contemporary Criminological Theory Peter Cordella, Larry J. Siegel, 1996 An anthology of 24 essays on major

developments in contemporary criminological theory *Anomie, Strain and Subcultural Theories of Crime* Joanne M. Kaufman, 2017-05-15 Anomie strain and subcultural theories are among the leading theories of crime Anomie theories state that crime results from the failure of society to regulate adequately the behavior of individuals particularly the efforts of individuals to achieve monetary success Strain theories focus on the impact of strains or stressors on crime including the inability to achieve monetary success through legal channels And subcultural theories argue that some individuals turn to crime because they belong to groups that excuse justify or approve of crime This volume presents the leading selections on each theory including the original statements of the theories key efforts to revise the theories and the latest statements of each theory The coeditors Robert Agnew and Joanne Kaufman are prominent strain theorists and their introductory essay provides an overview of the theories discusses the relationship between them and introduces each of the selections

Redirecting Human Rights A. Gear, 2010-04-09 Against the backdrop of globalization and mounting evidence of the corporate subversion of the Universal Declaration of Human Rights paradigm Anna Gear interrogates the complex tendencies within law that are implicated in the emergence of corporate humanity Gear presents a critical account of legal subjectivity linking it with law's intimate relationship with liberal capitalism in order to suggest law's special receptivity to the corporate form She argues that in the field of human rights law particularly within the Universal Declaration of Human Rights paradigm human embodied vulnerability should be understood as the foundation of human rights and as a key qualifying characteristic of the human rights subject The need to redirect human rights in order to resist their colonization by powerful economic global actors could scarcely be more urgent *Criminological Theories* Suzette Cote, 2002-03-19 This anthology is a superb collection of 36 articles covering all of the major theories past and present that inform criminology today What truly sets this volume apart is the inclusion of many articles discussing novel and often overlooked perspectives in criminological theory In fact many of these articles have never before been included in a reader Each article is framed by an introductory overview discussing the article's importance the context for its development and the author and concludes with discussion questions These articles include a thorough examination of topics such as white collar crime and developmental criminology as well as discussions of integrated theories that consider genetics psychology and environmental approaches As most journal articles are typically written for a professional audience the original articles have been substantially edited and abridged to make them more accessible to students The resulting reader will prove to be an invaluable resource for any undergraduate or graduate course where criminological theory plays a central role **Games, Groups, and the Global Good** Simon A. Levin, 2009-06-09 How do groups form how do institutions come into being and when do moral norms and practices emerge This volume explores how game theoretic approaches can be extended to consider broader questions that cross scales of organization from individuals to cooperatives to societies Game theory strategic formulation of central problems in the analysis of social interactions is used to develop multi level theories that

examine the interplay between individuals and the collectives they form The concept of cooperation is examined at a higher level than that usually addressed by game theory especially focusing on the formation of groups and the role of social norms in maintaining their integrity with positive and negative implications The authors suggest that conventional analyses need to be broadened to explain how heuristics like concepts of fairness arise and become formalized into the ethical principles embraced by a society *Our Posthuman Future* Francis Fukuyama,2017-06-15 Is a baby whose personality has been chosen from a gene supermarket still a human If we choose what we create what happens to morality Is this the end of human nature The dramatic advances in DNA technology over the last few years are the stuff of science fiction It is now not only possible to clone human beings it is happening For the first time since the creation of the earth four billion years ago or the emergence of mankind 10 million years ago people will be able to choose their children s sex height colour personality traits and intelligence It will even be possible to create superhumans by mixing human genes with those of other animals for extra strength or longevity But is this desirable What are the moral and political consequences Will it mean anything to talk about human nature any more Is this the end of human beings *Our Posthuman Future* is a passionate analysis of the greatest political and moral problem ever to face the human race

The Fair Society Peter Corning,2011-04 We ve been told again and again that life is unfair But what if we re wrong simply to resign ourselves to this situation Drawing on the evidence from our evolutionary history and the emergent science of human nature this title shows that we have an innate sense of fairness

The Social Science Encyclopedia Adam Kuper,2003-12-16 The Social Science Encyclopedia first published in 1985 to acclaim from social scientists librarians and students was thoroughly revised in 1996 when reviewers began to describe it as a classic This third edition has been radically recast Over half the entries are new or have been entirely rewritten and most of the balance have been substantially revised Written by an international team of contributors the Encyclopedia offers a global perspective on the key issues within the social sciences Some 500 entries cover a variety of enduring and newly vital areas of study and research methods Experts review theoretical debates from neo evolutionism and rational choice theory to poststructuralism and address the great questions that cut across the social sciences What is the influence of genes on behaviour What is the nature of consciousness and cognition What are the causes of poverty and wealth What are the roots of conflict wars revolutions and genocidal violence This authoritative reference work is aimed at anyone with a serious interest in contemporary academic thinking about the individual in society

International Law as Social Construct Carlo Focarelli,2012-05-24 This book explores international law as a social construct by analysing its social foundations and by re conceptualizing the way in which it is commonly understood It asks what law is and how it works in society and shows why it is worth to struggle for new and better working rules in the international legal order

Holistic Darwinism Peter Corning,2010-08-15 In recent years evolutionary theorists have come to recognize that the reductionist individualist gene centered approach to evolution cannot sufficiently account for the emergence of complex biological systems over time Peter

A Corning has been at the forefront of a new generation of complexity theorists who have been working to reshape the foundations of evolutionary theory Well known for his Synergism Hypothesis a theory of complexity in evolution that assigns a key causal role to various forms of functional synergy Corning puts this theory into a much broader framework in Holistic Darwinism addressing many of the issues and concepts associated with the evolution of complex systems Corning s paradigm embraces and integrates many related theoretical developments of recent years from multilevel selection theory to niche construction theory gene culture coevolution theory and theories of self organization Offering new approaches to thermodynamics information theory and economic analysis Corning suggests how all of these domains can be brought firmly within what he characterizes as a post neo Darwinian evolutionary synthesis Evolution, Order and Complexity Kenneth Boulding,Elias Khalil,2002-01-04 Evolution Order and Complexity reflects topical interest in the relationship between the social and natural worlds It represents the cutting edge of current thinking which challenges the natural social dichotomy thesis by showing how the application of ideas which derive from biology can be applied and offer insight into the social realm This is done by introducing the general system theory to the methodological debate on the relation of human and natural sciences **Missing the Revolution** Jerome H. Barkow,2006 The naturalizing perspective of Darwinian thought has become one of the major intellectual currents of our time pervading contemporary understandings of human nature and society Unfortunately many social scientists in sociology psychology and sociocultural anthropology have failed to engage with it Barkow asks his fellow social scientists to put aside their all too common preconceptions and stereotypes of the biological and to consider a powerful argument that is far different from that of those who once invoked a vocabulary of genes and Darwin as a justification for genocide He argues that the theoretical perspective that has been so successful when applied to the behavior of every other animal speicies can be applied just as successfully to our own and that the real debate is about how to apply it BOOK JACKET **Leo Strauss and His Legacy** John Albert Murley,2005-01-01 With over 10 000 entries identifying work of hundreds of Strauss s students and their students students this bibliography is the most indeed the only comprehensive guide to published writing in the tradition of Leo Strauss Murley includes Strauss s own complete bibliography and that of one of his most revered students George Anastaplo Light on the Human Heart Colin Patterson,2022-07-18 We know that there are parts of our self which are hidden from our view Many of us wonder how we might identify those deeper aspects of ourselves that shape our thoughts and actions What really is in the human heart This book seeks to shed some light on the matter by analyzing the basic human motives which have evolved over millions of years and today lie largely closed to our awareness beneath the sophisticated persona we present to the public The author writes as a Christian theologian who seeks to both contribute to the renewal of theological anthropology and to assist believers to deepen their understanding of themselves and the world in which they live and in so doing grow to a fuller maturity as disciples of Jesus Christ Civil Society: The Engine for Economic and Social Well-Being Sebastian A. Văduva,Randolph

Wilt, Ioan Fotea, Lois P. Văduva, 2018-06-18 This proceedings volume explores the concept of civil society as an engine for economic and social well being Featuring contributions from the 2017 Griffiths School of Management and IT Annual Conference on Business Entrepreneurship and Ethics GMSAC held in Oradea Romania this volume provides different perspectives emerging studies and trends that are crucial to the further understanding of the interconnection of civil society economic development and social stability The enclosed contributions address key topics such as a the ways in which national regional and local governments are best equipped to support economic and social development b how government business and non profit sectors can support economic and social stability and c the ways in which growing economies active societies can strengthen civil society Research and practice have proven that there is a great potential for civil society organizations to support socio economic well being both directly and indirectly As a result the interplay between civil society economics and social well being is highly relevant to current business and economic research and is a topic of discussion by academics and practitioners in the government business and non profit sectors This volume showcases some of the current research cases and discussions in this area from an interdisciplinary global perspective Featuring contributions exploring timely subjects such as consumer behavior the hospitality industry education corporate social responsibility CSR banking health care and semiotics this book is appropriate for researchers academics and policy makers in economic and social development business ethics and sustainability

Risk Management in Supply Chains Mohammad Heydari, Kin Keung Lai, Zhou Xiaohu, 2019-09-19 The book examines a relatively unexplored issue in supply chain risk management which is how long companies specifically take to respond to catastrophic events of low probability but high impact The book also looks at why such supply chain disruptions are unavoidable and consequently all complex supply chains are inherently at risk The book illustrates how companies can respond to supply chain disruptions with faster responses and in shorter lead times to reduce impact In reducing total response time designing solutions and deploying a recovery plan sooner after a disruption in anticipation of such events companies reduce the impact of disruption risk The book also explores the basics of multiple criteria decision making MCDM and analytic hierarchy process AHP and how they contribute to both the quality of the financial economic decision making process and the quality of the resulting decisions The book illustrates through cases in the construction sector how this industry has become more complex and riskier due to the diverse nature of activities among global companies
