British Quaternary The volume is concerned with the history of Britain over approximately the last two million years of geological time during the repeated glacial phases of the Quaternary Ice Age and the warmer intervals between them Many such climatic fluctuations are recorded in the deposits of the Thames which can be shown to have existed as the predominant west to east drainage line in south eastern England throughout the Pleistocene The Thames has left a detailed record of its earlier presence in the form of deposits which comprise fluvially aggraded floodplain sediments predominantly gravels preserved on the valley sides where they form geomorphological terrace features The oldest deposits are at the highest levels forming a terrace staircase that records successive stages in the evolution of the valley **Distributed Source Coding** Shuang Wang, Yong Fang, Samuel Cheng, 2017-01-05 Distributed source coding is one of the key enablers for efficient cooperative communication. The potential applications range from wireless sensor networks and hoc networks and surveillance networks to robust low complexity video coding stereo Multiview video coding HDTV hyper spectral and multispectral imaging and biometrics The book is divided into three sections theory algorithms and applications Part one covers the background of information theory with an emphasis on DSC part two discusses designs of algorithmic solutions for DSC problems covering the three most important DSC problems Slepian Wolf Wyner Ziv and MT source coding and part three is dedicated to a variety of potential DSC applications Key features Clear explanation of distributed source coding theory and algorithms including both lossless and lossy designs Rich applications of distributed source coding which covers multimedia communication and data security applications Self contained content for beginners from basic information theory to practical code implementation The book provides fundamental knowledge for engineers and computer scientists to access the topic of distributed source coding It is also suitable for senior undergraduate and first year graduate students in electrical engineering computer engineering signal processing image video processing and information theory and communications
