Computational Support for Discrete Mathematics Nathaniel Dean, Gregory E. Shannon, With recent technological advances in workstations graphics graphical user interfaces and object oriented programming languages a significant number of researchers are developing general purpose software and integrated software systems for domains in discrete mathematics including graph theory combinatorics combinatorial optimization and sets This software aims to provide effective computational tools for research applications prototyping and teaching In March 1992 DIMACS sponsored a workshop on Computational Support for Discrete Mathematics in order to facilitate interactions between the researchers developers and educators who work in these areas Containing refereed papers based on talks presented at the workshop this volume documents current and past research in these areas and should provide impetus for new interactions of Fibonacci Numbers G.E. Bergum, Andreas Philippou, Alwyn F. Horadam, 1989-12-31 This book contains thirty six papers from among the forty five papers presented at the Third International Conference on Fibonacci Numbers and Their Applications which was held in Pisa Italy from July 25 to July 29 1988 in honor of Leonardo de Pisa These papers have been selected after a careful review by well known referees in the field and they range from elementary number theory to probability and statistics The Fibonacci numbers are their unifying bond It is anticipated that this book like its two predecessors will be useful to research workers and graduate students interested in the Fibonacci numbers and their applications August 1989 The Editors Gerald E Bergum South Dakota State University Brookings South Dakota U S A Andreas N Philippou Ministry of Education Nicosia Cyprus Alwyn F Horadam University of New England Armidale N S W Australia xv THE ORGANIZING COMMITTEES LOCAL COMMITTEE INTERNATIONAL COMMITTEE Dyornicich Roberto Chairman Horadam A F Australia Co chairman Filipponi Piero Philippou A N Cyprus Co chairman Perelli Alberto Ando S Japan Viola Carlo Bergum G E U S A Zannier Umberto Johnson M B U S A Kiss P Hungary Tijdeman Robert The Netherlands Tognetti K Australia XVII LIST OF CONTRIBUTORS TO THE CONFERENCE ADLER I RR 1 Box 532 North Bennington VT 05257 9748 Separating the Biological from the Mathematical Aspects of Phyllotaxis AKRITAS A G coauthor P G Bradford The Role of the Fibonacci Sequence in the Isolation of the Real Roots of Polynomial Equations **Pattern and Shape** Kurt Rowland, 1964 For further reading p 54 Parallel Algorithms M H Alsuwaiyel, 2022-05-30 This book is an introduction to the field of parallel algorithms and the underpinning techniques to realize the parallelization. The emphasis is on designing algorithms within the timeless and abstracted context of a high level programming language The focus of the presentation is on practical applications of the algorithm design using different models of parallel computation Each model is illustrated by providing an adequate number of algorithms to solve some problems that quite often arise in many applications in science and engineering The book is largely self contained presuming no special knowledge of parallel computers or particular mathematics In addition the solutions to all exercises are included at the end of each chapter The book is intended as a text

It includes adequate material for a course in parallel algorithms at both undergraduate and graduate levels Nonlinear Elliptic Partial Differential Equations J. P. Gossez, Denis Bonheure, 2011 This volume contains papers on semi linear and quasi linear elliptic equations from the workshop on Nonlinear Elliptic Partial Differential Equations in honor of Jean Pierre Gossez s 65th birthday held September 2 4 2009 at the Universite Libre de Bruxelles Belgium The workshop reflected Gossez's contributions in nonlinear elliptic PDEs and provided an opening to new directions in this very active research area Presentations covered recent progress in Gossez s favorite topics namely various problems related to the p Laplacian operator the antimaximum principle the Fucik Spectrum and other related subjects This volume will be of principle interest to researchers in nonlinear analysis especially in partial differential equations of elliptic type Analysis and Topology in Nonlinear Differential Equations Djairo G de Figueiredo, João Marcos do Ó, Carlos Tomei, 2014-06-16 This volume is a collection of articles presented at the Workshop for Nonlinear Analysis held in Jo o Pessoa Brazil in September 2012 The influence of Bernhard Ruf to whom this volume is dedicated on the occasion of his 60th birthday is perceptible throughout the collection by the choice of themes and techniques The many contributors consider modern topics in the calculus of variations topological methods and regularity analysis together with novel applications of partial differential equations In keeping with the tradition of the workshop emphasis is given to elliptic operators inserted in different contexts both theoretical and applied Topics include semi linear and fully nonlinear equations and systems with different nonlinearities at sub and supercritical exponents with spectral interactions of Ambrosetti Prodi type Also treated are analytic aspects as well as applications such as diffusion problems in mathematical genetics and finance and evolution equations related to electromechanical devices Arithmetic and Geometry Gisbert Wüstholz, Clemens Fuchs, 2019-10-08 Arithmetic and Geometry presents highlights of recent work in arithmetic algebraic geometry by some of the world's leading mathematicians Together these 2016 lectures which were delivered in celebration of the tenth anniversary of the annual summer workshops in Alpbach Austria provide an introduction to high level research on three topics Shimura varieties hyperelliptic continued fractions and generalized Jacobians and Faltings height and L functions The book consists of notes written by young researchers on three sets of lectures or minicourses given at Alpbach The first course taught by Peter Scholze contains his recent results dealing with the local Langlands conjecture The fundamental question is whether for a given datum there exists a so called local Shimura variety In some cases they exist in the category of rigid analytic spaces in others one has to use Scholze's perfectoid spaces. The second course taught by Umberto Zannier addresses the famous Pell equation not in the classical setting but rather with the so called polynomial Pell equation where the integers are replaced by polynomials in one variable with complex coefficients which leads to the study of hyperelliptic continued fractions and generalized Jacobians The third course taught by Shou Wu Zhang originates in the Chowla Selberg formula which was taken up by Gross and Zagier to relate values of the L function for elliptic curves with the height of Heegner points on the curves Zhang X Yuan and Wei Zhang prove the Gross Zagier formula on Shimura curves and verify the Colmez conjecture on average **Adaptive Stream Mining** Albert Bifet, 2010 This book is a significant contribution to the subject of mining time changing data streams and addresses the design of learning algorithms for this purpose It introduces new contributions on several different aspects of the problem identifying research opportunities and increasing the scope for applications It also includes an in depth study of stream mining and a theoretical analysis of proposed methods and algorithms The first section is concerned with the use of an adaptive sliding window algorithm ADWIN Since this has rigorous performance guarantees using it in place of counters or accumulators it offers the possibility of extending such guarantees to learning and mining algorithms not initially designed for drifting data Testing with several methods including Na ve Bayes clustering decision trees and ensemble methods is discussed as well The second part of the book describes a formal study of connected acyclic graphs or trees from the point of view of closure based mining presenting efficient algorithms for subtree testing and for mining ordered and unordered frequent closed trees Lastly a general methodology to identify closed patterns in a data stream is outlined This is applied to develop an incremental method a sliding window based method and a method that mines closed trees adaptively from data streams These are used to introduce classification methods for tree data streams Technical Manual United States. Randomization, Masking, and Allocation Concealment Vance Berger, 2017-10-30 Randomization Masking and Allocation Concealment is indispensable for any trial researcher who wants to use state of the art randomization methods and also wants to be able to describe these methods correctly Far too often the subtle nuances that distinguish proper randomization from flawed randomization are completely ignored in trial reports that state only that randomization was used with no additional information Experience has shown that in many cases the type of randomization that was used was flawed It is only a matter of time before medical journals and regulatory agencies come to realize that we can no longer rely on or publish flawed trials and that flawed randomization in and of itself disqualifies a trial from being robust or high quality even if that trial is of high quality otherwise This book will help to clarify the role randomization plays in ensuring internal validity and in drawing valid inferences from the data The various chapters cover a variety of randomization methods and are not limited to the most common and most flawed ones Readers will come away with a profound understanding of what constitutes a valid randomization procedure so that they can distinguish the valid from the flawed among not only existing methods but also methods yet to be developed Multiplicity-free Representations of Algebraic Groups Martin W.
