**Surface Phenomena in the Structural and Mechanical Behaviour of Solid Polymers** L. Volynskii, N. F. Bakeev, 2018-09-03 Surface Phenomena in the Structural and Mechanical Behaviour of Solid Polymers explores the role of various surface phenomena in the structural and mechanical behaviour of amorphous and semicrystalline polymers This book Discusses the development of the interfacial surface in the deformation of polymers Examines the healing of interfacial surfaces in polymers Inspects the structure and properties of polymers in thin films and surface layers Evaluates the mechanism of inelastic deformation in glassy amorphous polymers Investigates strain softening and the phenomena taking place upon deformation of polymers in active liquid media Covers the Reh binder effect or the adsorption reduction of the strength of solids Describes the properties of polymers in environmental or solvent crazing Analyses the interaction of the highly developed surface of crazed polymers with diverse low and high molecular mass components Addresses the instability and self organisation of surface layers in polymers and diverse polymer systems Presents theoretical speculations concerning the structurally mechanical behaviour of a rigid coating on a soft substratum RCSS systems Assesses the stress strain properties of the thin surface layers of polymers and the nanometric coatings deposited on their surfaces Highlights the efficacy of the approaches developed for RCSS systems for the analysis and description of natural phenomena Details the applied aspects of surface phenomena in the structurally mechanical behaviour of polymers Thus Surface Phenomena in the Structural and Mechanical Behaviour of Solid Polymers provides a useful framework for the development of new and innovative polymer based materials

**Macromolecular Science and Engineering** Yoshikazu Tanabe, 2013-03-07 The explosion in the scale of production of polymers has made our daily life more convenient during the past several decades and caused serious discussion on recycling and safety During this time many polymer researchers who have constructed new industries and new fields of science changed their interests to specialty polymers and some have moved to bioscience On the other hand the expected limitations of silicon devices which are fundamental in the present semiconductor and personal computer world have initiated much interest in the idea of molecular electronic devices Based on this idea ultrathin films with many functions were studied but it is still difficult to use them in real information systems In these studies polymer scientists and solid state physicists collaborated with each other and the new field of conjugated materials including charge transfer complexes conjugated conductive materials and fullerenes has grown Here optical properties are the main interest because new materials are necessary in the advanced information society of the twenty first

century During the course of this development the boundary between polymers and small organic molecules has become blurred except for the synthetic chemists This new field of science and engineering is growing and will propose new materials and new devices The present book aims at a compact presentation of the principal concepts in current polymeric and organic materials science and engineering

*Study of lithium deposition and applicability of solid polymer electrolytes in lithium cells (Band 10)* Sanaz Momeni Boroujeni ,2022-12-30 Lithium Li deposition is a problem in Li batteries LB both Li metal LMB and Li ion LIB batteries which limits their performance in terms of power and energy density Two trends can be identified in the advancement of LBs concerning the problem of Li deposition optimization of the existing system the state of the art LIBs and further development of cell components such as electrolytes This work addresses both approaches In the first part this study investigates Li deposition in LMB and LIBs A novel method to study the Li based transport mechanisms in LIBs is introduced Later the kinetic deviations between anode and cathode as a consequence of aging and the relation of these deviations to the occurrence of Li plating are discussed In the second part the applicability of PEO based solid polymer electrolytes for LMBs to overcome the Li plating issue is investigated The introduction of various interfacial interlayers at the cathode electrolyte interphase was studied to improve the electrochemical stability of the cells Cells with an in situ electro deposited interlayer showed the best cyclability
