Safety Through Design

Key Points

- Safety must begin long before construction ever starts.
- Safety is best achieved by eliminating hazards, not just managing and mitigating them.
- Expanding our basis of design to eliminate hazards holds great promise.

Leading owner organizations are continuing to drive safety performance improvement.

- Increasingly they will represent industry's platinum clients.

Over the years these leading owners have driven safety focus up a value chain that:

- Started with mandatory usage of PPE (personal protective equipment).
- Has administrative controls founded on training and work scheduling.
- Has engineering controls providing isolation, separation, and guarding.
- Through substitution, is driving the industry to use something else or do it a different way.

These safety focused industry leaders are now at the apex of this value chain, namely, designing out the hazard.

Safety Through Design:

Safety Through Design Wayne C. Christensen, Fred A. Manuele, 1999 **Fall Prevention Through Design in Construction** Imriyas Kamardeen, 2015-06-05 The role of designers has traditionally been to design a building so that it conforms to accepted local building codes The safety of workers is left up to the contractor building the designs Research shows however that designers can have an especially strong influence on construction safety during the concept preliminary and detailed design phases This book establishes the new knowledge and conceptual frameworks necessary to develop a mobile computing enabled knowledge management system that can help reduce the high rate of construction falls There are three main objectives of this book 1 To create a new Prevention through Design PtD knowledge base to model the relationships between fall risks and design decisions 2 To develop a PtD mobile App to assist building designers in fall prevention through design 3 To evaluate the practical implications of the PtD mobile App for the construction industry especially for building designers and workers The cutting edge technologies explored in this book have the potential to significantly reduce the rate of serious injuries that occur in the global construction industry This is essential reading for researchers and advanced students of construction management with an interest in safety or mobile technologies *Safe Design and Construction of Machinery* Elizabeth Bluff, 2017-03-02 The origin of this book is the compelling evidence that a high proportion of machinery related deaths and injuries are attributable to genuine and serious risks originating within machine design and construction This trend continues despite significant legal obligations notably the European regulatory regime giving effect to the Machinery Directive among others and a substantial body of specialist knowledge originating in the disciplines of human factors and safety engineering Grounded in empirical research with machinery manufacturers this book aims to elucidate the factors and processes shaping firms performance for machinery safety and considers their compatibility with legal obligations Through a unique blending of rich empirical data coupled with safety human factors socio legal and learning scholarship the book provides both a nuanced account of firms performance for machinery safety and makes conceptual and theoretical contributions to understanding and explaining their performance Specifically the book elucidates the role of knowledge and motivational factors and how these are constituted in shaping firms performance It reveals the multiple state and non state influences that create plural responses among manufacturing firms which typically operate in supply chains and networks and often globally These insights provide the foundations to enhance regulatory design and the book s conclusion recommends some innovative directions for regulatory interventions to sustain the safe design and construction of machinery [Handbook of Construction Safety, Health and Well-being in the Industry 4.0 Era](#) Patrick Manu, Gao Shang, Paulo Jorge Silva Bartolo, Valerie Francis, Anil Sawhney, 2023-05-12 This Handbook seeks to examine and advance current understanding of the confluence of construction health safety and well being and the broad range of Industry 4.0 technologies in use in the architecture engineering and construction AEC industry Globally the construction

sector accounts for more than 100 000 occupational fatalities annually In many countries reports of work related accidents injuries and illnesses are commonplace and there is an urgent need to improve the occupational safety and health OSH outlook of the construction sector The fourth industrial revolution presents opportunities to leverage modern technologies e g big data artificial intelligence automation sensors AR VR and robotics to improve the poor OSH performance of the construction industry However embracing such technologies could also induce unintended adverse consequences for the safety health and well being of construction workers Therefore the realisation of the opportunities as well as the mitigation of potentially adverse consequences requires research informed holistic insights around the union of Industry 4 0 and construction occupational safety and health management This cutting edge volume addresses a significant gap in literature by bringing together experienced academics and researchers to highlight the drivers opportunities and drawbacks of the merging of Industry 4 0 with construction health safety and well being After a detailed introductory section which highlights key issues and challenges section one covers the application of a broad range of digital technologies then section two discusses the application of industrial production and cyber physical systems in the context of construction safety and health management Readers from a broad range of AEC backgrounds as well as safety professionals and technologists will come to understand how the technologies are applied and the resulting OSH benefits as well as potential drawbacks
