Computer Graphics and Geometric Modeling for Engineers Vera B. Anand, 1993-02-05. Computer graphics and geometric modeling play a fundamental role in instruction for engineering design. It is an acknowledged fact that the computer is needed for data storage and numerical processing. Computer-aided modeling, on the other hand, strengthens the engineer's ability to think through a design because it eases the process of establishing both conceptual trade-offs at the preliminary design stage and the choice of parts to bracket a specific design. Computer graphics allows a full description of an engineering component to

be stored in a CAD system This captures both the visual and quantitative aspects of object creation Geometric modeling describes an object by means of mathematical and abstract relationships and focuses on the efficient computer representation of geometry Both are integral parts of the engineering education process This textbook teaches the basic principles and techniques of computer graphics and geometric modeling from the point of view of engineering applications The text is therefore aimed for engineers although some generic computer graphics topics are also covered since they are needed as background information essential to an overall understanding of the material It is designed as a one or two semester course at the junior senior or graduate levels
