Sensory Experience:

The Metaphysics of Sensory Experience David Papineau, 2021-03-04 What are the materials of conscious perceptual experience What is going on when we are consciously aware of a visual scene or hear sounds or otherwise enjoy sensory experience In this book David Papineau exposes the flaws in contemporary answers to this central philosophical question and defends a new alternative Contemporary theories of perceptual experience all hold that conscious experiences reach out into the world beyond the mind According to naive realism experiences literally incorporate perceived facts while representationalism holds that experiences contain ordinary properties of the kind possessed by physical objects These ideas might seem attractive at first sight however Papineau shows that they do not stand up to examination Instead he argues for a purely qualitative account of sensory experience Conscious sensory experiences are intrinsic states with no essential connection to external circumstances or represented properties This might run counter to initial intuition yet Papineau develops this qualitative theory in detail and illustrates how it can accommodate the rich structure of sensory experience Papineau's qualitative account has respectable antecedents in the history of philosophy By placing the qualitative theory on a firm footing he shows that those curious about experience need not be restricted to the options in contemporary philosophical discourse

Sensory Experiences Danièle Dubois, Caroline Cance, Matt Coler, Arthur Paté, Catherine Guastavino, 2021-12-15 Sensory Experiences Exploring meaning and the senses describes the collective elaboration of a situated cognitive approach with an emphasis on the relations between language and cognition within and across different sensory modalities and practices This approach grounded in 40 years of empirical research is a departure from the analytic reductive view of human experiences as information processing The book is structured into two parts Each author first introduces the situated cognitive approach from their respective sensory domains vision audition olfaction gustation The second part is the collective effort to derive methodological guidelines respecting the ecological validity of experimental investigations while formulating operational answers to applied questions such as the sensory quality of environments and product design This book will be of interest to students researchers and practitioners dealing with sensory experiences and anyone who wants to understand and celebrate the cultural diversity of human productions that make life enjoyable

Enabling Access Barry Carpenter,Chris Stevens,Keith Bovair,Rob Ashdown,2014-04-08 First Published in 1997 In special education we are at last in a good position to offer pupils a broad and balanced curriculum which is relevant to their needs and which is based on the same range of provision enjoyed by all pupils Such a curriculum can only be planned as a cohesive whole compartmentalizing aspects of the whole curriculum risks seeing one part as having more merit or worth than another The whole curriculum in all schools will vary depending on local needs and opportunities In special education it is important that we embrace that whole curriculum using its diversity and opportunity to plan for breadth balance and relevance This book makes a significant contribution to the developments in planning for access to the whole curriculum

Disjunctivism Marcus Willaschek,2013-09-13 Does perception provide us with direct and unmediated access to the world around us The so called argument from illusion has traditionally been supposed to show otherwise from the subject s point of view perceptual illusions are often indistinguishable from veridical perceptions hence perceptual experience as such cannot provide us with knowledge of the world but only with knowledge of how things appear to us Disjunctive accounts of perceptual experience first proposed by John McDowell and Paul Snowdon in the early 1980s and at the centre of current debates in the philosophy of perception have been proposed to block this argument According to the traditional view a case of perception and a subjectively indistinguishable illusion or hallucination can exemplify what is fundamentally the same kind of mental state even though they differ in how they relate to the non mental environment In contrast according to the disjunctive account the concept of perceptual experience should be seen as essentially disjunctive encompassing at least two distinct kinds of mental states namely genuinely world involving perceptions and mere appearances This book presents seven recent essays on disjunctivism first published in two special issues of Philosophical Explorations An International Journal for the Philosophy of Mind and Action
