Sensory Reeducation Of The Hand After Stroke:

Sensory Re-Education of the Hand After Stroke Margaret Yekutieli, 2000 Stroke patients continue to present a major challenge to the rehabilitation professions In particular the rehabilitated patient with a useless hand remains an all too common phenomenon This book focuses on the sensory perceptual disturbances caused by stroke which even if slight can be the crucial factor in poor hand function A wide ranging review is presented of the processes of functional reorganisation by which the brain responds to the demands posed by injury as well as by learning An inescapable conclusion from this literature is that any therapy which aims to harness these processes for the restoration of function after stroke needs to engage the patient's attention and motivation This is followed by a detailed description of the method of Sensory Re education developed by the author through long experience with patients and culminating in a clinical trial which established its effectiveness While the book is intended primarily for physiotherapists and occupational therapists it contains much to interest all who are concerned with brain function in health and disease including neurologists and neuropsychologists as well as stroke patients and their families Contents Introduction The Challenge Stroke and its Aftermath The Effectiveness of Therapy The Quest for a Different Approach Sensory Loss in Stroke Sensory Testing and the Frequency and Types of Deficit The Functional Implications of Sensory Loss The Theoretical Basis of Sensory Re education Sources Peripheral Nerve Lesions Central Lesions Guide lines for Intervention Contributions from Psychology Attention Motivation The Essentials of Sensory Re education The Focus on the Hand The Therapeutic Relationship The Protocol for a Sensory Task Summary The Curriculum I How to Use the Curriculum Lessons in Touch The Curriculum II Lessons in Proprioception Lessons in the Recognition of Objects and Their Qualities Suggestions for Homework Validation of the Method Theoretical Considerations A Controlled Trial The Next Step Wider Applications Sensory Problems in Standing and Walking After Stroke Cerebral Palsy Other Conditions Wider Applications Conclusion

The Clinical Science of Neurologic Rehabilitation Bruce H. Dobkin, 2003-01-16 The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery Dr Dobkin shows how functional neuroimaging serves as a marker for whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix The management of common medical issues impairments and disabilities are described across diseases Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled Neurologic Rehabilitation The title has been changed to reflect Dr Dobkin's sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients

Kielhofner's Research in Occupational Therapy Renee Taylor, 2023-10-16 Renee Taylor and an international team of contributors carry on Gary Kielhofner's innovative vision to demystify the research process and demonstrate that research is essential to occupational therapy practice. They present a comprehensive guide to conducting applied research in the field from qualitative, quantitative and mixed perspectives for students and clinicians. You'll begin with a grounding in conducting evidence-based practice in OT and an explanation of the six broad components of the research process. Then you will explore research designs, measurements and statistical analysis for qualitative and quantitative studies. You'll examine the steps and procedures required to conduct research and how research can be used to shape professional practice and improve patient care.

Trigeminal Nerve Injuries Michael Miloro, 2013-05-14 Trigeminal nerve injuries present complex clinical challenges and can be very distressing for patients, resulting in abnormal sensations of the orofacial region. Yet surgeons may lack the knowledge required for optimal patient management based upon the specific nerve injury. This textbook is the first to be devoted to the diagnosis and management of trigeminal nerve injuries. A wide range of topics are covered, including historical perspectives, demographics, etiology, anatomy and physiology, pathophysiology, clinical neurosensory testing, nonsurgical management and surgical management, and principles of microneurosurgery specifically involving the inferior alveolar and lingual nerves. Algorithms and a glossary are provided that will assist in the clinical management of these complex scenarios. The authors include surgeons with considerable experience and expertise in the field who have previously published on the subject. This book will serve as an ideal clinical reference for surgeons with patients who sustain trigeminal nerve injuries.

Improving Functional Outcomes in Physical Rehabilitation Edward Bezkor, Susan B. O'Sullivan, Thomas J. Schmitz, 2021-11-19 Achieve the best functional outcomes for your patients. Here is a practical step-by-step guide to understanding the treatment process and selecting the most appropriate interventions for your patients. Superbly illustrated in-depth coverage shows you how to identify functional deficits, determine what treatments are appropriate and then implement them to achieve the best functional outcome for your patients. Learn through reading, seeing and doing. Seventeen case studies in the text correspond to seventeen videotaped case studies with voice-over narration online at FADavis.com. These videos show you how practicing therapists interact with their clients in rehabilitation settings from sample elements of the initial examination through the interventions to the functional outcomes to make a difference in patients' lives.

Stroke Rehabilitation LeeAnne M. Carey, 2012-06-28 Stroke Rehabilitation: Insights from Neuroscience and Imaging informs and challenges neurologists, rehabilitation therapists, imagers and stroke specialists to adopt more restorative and scientific approaches to stroke rehabilitation based on new evidence from neuroscience and neuroimaging literatures. The fields of cognitive neuroscience and neuroimaging are advancing rapidly and providing new insights into human behavior and learning. Similarly, improved knowledge of how the brain processes information after injury and recovers over time is

providing new perspectives on what can be achieved through rehabilitation Stroke Rehabilitation explores the potential to shape and maximize neural plastic changes in the brain after stroke from a multimodal perspective Active skill based learning is identified as a central element of a restorative approach to rehabilitation The evidence behind core learning principles as well as specific learning strategies that have been applied to retrain lost functions of movement sensation cognition and language are also discussed Current interventions are evaluated relative to this knowledge base and examples are given of how active learning principles have been successfully applied in specific interventions The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach Focusing on new insights from neuroscience and imaging the book explores the potential to tailor interventions to the individual based on viable brain networks
