

Lateral Inhibition

Receptors that are most strongly stimulated inhibit those around them.

This allows us to perceive well-defined sensations at a single location instead of a "fuzzy" border

This process occurs in the CNS, where interneurons that pass between sensory neurons are inhibitory.

Lateral inhibition allows us to distinguish different pitches, closely related odors, or the borders of light and darkness, for example.

Sensory Inhibition:

Sensory Inhibition Georg Von Békésy, 2017-03-14 Psychological experiments carried out over a period of nearly forty years led Georg von Békésy to realize that inhibition interconnects at least in one respect the fields of vision hearing skin sensations taste and smell This book indeed almost creates the field of sensory inhibition as a significant one for study bringing understanding to many observations that formerly seemed uncertain or unrelated and raising many problems still to be solved Originally published in 1967 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Highly Redundant Sensing in Robotic Systems Julius T. Tou, Jens G. Balchen, 2012-12-06 Design of intelligent robots is one of the most important endeavors in robotics research today The key to intelligent robot design lies in sensory systems for robotic control and manipulation In an unstructured environment robotic sensing translates measurements and characteristics of the environment and working objects into useful information

A robotic system is usually equipped with a variety of sensors to perform redundant sensing and achieve data fusion This book contains revised versions of papers presented at a NATO Advanced Research Workshop held in Florida in September 1989 within the activities of the NATO Special Programme on Sensory Systems for Robotic Control The fundamental issues addressed in this volume were Theory and techniques including knowledge based systems geometrical fusion Boolean fusion probabilistic fusion feature based fusion error estimation approach and Markov process modeling General concepts including microscopic redundancy at the sensory element level macroscopic redundancy at the sensory system level parallel redundancy and standby redundancy Implementation and application including robotic control sensory technology robotic assembly robot fingers sensory signal processing sensory system integration and PAPIA architecture Biological analogies including neural nets pattern recognition low level fusion and motor learning
