The Role of Sentinel Node Mapping and Lymphadenectomies in Veterinary Surgical Oncology

Abstract: Lymph node status is an important prognostic factor in multiple oncologic conditions in humans and companion animals. In addition, the resection of the affected nodes can have a substantial therapeutic effect on various cancer subtypes in both species. Given the impact on prognosis and management, it is paramount to identify and remove affected nodes. While this can be achieved by removing predefined patterns of nodes (regional lymphadenectomy/resection of defined lymphatic stations), modern approaches increasingly utilize sentinel node mapping to identify the draining nodes to decrease the mortality of lymphadenectomies. Recent studies have shown that dogs have more comparable anatomy of the lymphatic system to humans than other animal models such as rodents or pigs. Given the fact that dogs develop spontaneous cancer types that share several similarities to their human counterparts, they represent a valuable translational model. The management of the lymphatic basin and sentinel node mapping have gained increased attention in veterinary surgical oncology in recent years. The present review aims at summarizing the resulting findings and their impact on patient management.

1. Introduction

Lymph node (LN) status is an important prognostic factor for the staging of various cancers in human and veterinary medicine, and the resection of metastatic nodes can improve outcomes in selected cancer types [1–6]. Virchow and Halsted already recognized the importance of the lymphatic system serving as a major barrier for cancer cells [7,8]. Initially, it was assumed that the closest regional LNs were the first sites to be affected by metastases, and the radical resection of the tissue surrounding the tumor was advocated to include all regional nodes [7]. Radical surgical resections of the lymphatic basin remained the unchanged treatment of choice for certain tumors in human surgical oncology until the mid-20th century, when sentinel lymph node (SLN) mapping and more selective lymphadenectomies evolved for several cancer types, including malignant melanoma, breast, vulvar, and cervical cancers [9].

Thus far, a potential therapeutic advantage of lymphadenectomy in companion animals has only been advocated in a few cancer types [1]. One problem in the assessment of the impact of lymphadenectomies in various cancers in veterinary patients is that, to date, no generally accepted resection routine exists for most conditions. In most settings, LNs are resected if they appear enlarged or structurally altered [10–12], although studies have repeatedly shown that the size of the lymph node is no predictor of nodal involvement [13–15]. Alternatively, the resection of RLN is performed, involving the removal of a single LN rather than entire lymphatic stations [1]. These approaches are generally poorly standardized and most certainly lead to the undertreatment of potentially affected LNs. Recently, SLN mapping has gained increased attention. This

Dept. of Surgical Oncology, 2006 Written by current and former surgical oncology fellows of the world renowned M D Anderson Cancer Center this portable handbook is a practical guide to established surgical oncology principles for each organ system This new Fourth Edition features extensive updates including new chapters on reconstructive surgery in the cancer patient Concise chapters illustrated with algorithms and line drawings outline the essential elements of diagnosis staging and clinical management of solid tumors treated in surgical practice The authors emphasize multidisciplinary treatment planning including therapy sequencing and biologic therapies

Clinical Scenarios in Surgical Oncology Vijay P. Khatri, 2006 This unique case based review of surgical oncology offers excellent preparation for oral board examinations which emphasize both general knowledge and case management The book presents 91 cases structured to reflect the surgeon s decision making process Each case begins with a patient presentation and imaging studies or pathology results and proceeds through a series of decision points differential diagnosis requests for additional tests diagnosis surgical approach discussion of potential pitfalls and follow up Cases are grouped by organ system and each section ends with a treatment algorithm summarizing the decision points Nearly 400 radiologic images and other relevant illustrations accompany the text

Surgical Oncology Raphael E. Pollock, 1997-11-30 Among the standard oncology modalities surgical oncology is singular in that it lacks a separate board certification or even an added qualification mechanism Card carrying surgical oncologists are certified by the American Board of Surgery as are all other general surgeons What distinguishes the surgical oncologist is a set of cognitive skills rather than a specific armamentarium of surgical techniques This different conceptual framework is derived from extensive additional training that leads to an in depth understanding of the natural history and biologic behavior of the various solid tumor systems Equipped with this perspective

the surgical oncologist is particularly well positioned to integrate the various available therapeutic modalities into a coherent care program for the solid tumor patient. As a central theme, the chapters of this book demonstrate that increasingly sophisticated diagnostic and staging approaches are helping to move chemotherapy and radiotherapy into the preoperative neoadjuvant setting. This fundamental alteration is based on the awareness that even early stage solid tumor disease is frequently systemic at the time of presentation at least on a subclinical level. And although the primary tumor may be controllable by surgery, with radiotherapy the uncontrolled and initially clinically unapparent distant disease ultimately determines patient survival. The other perspective driving the neoadjuvant approach is an emerging awareness that for most solid tumor systems neoadjuvant treatment responses can facilitate less mutilating surgery with comparable levels of local disease control.

Comparative Effectiveness in Surgical Oncology Karl Y. Bilimoria, Christina A. Minami, David M. Mahvi, 2015-02-12

Despite tremendous recent advances in the treatment of most malignancies, there remain several critical questions for each cancer. This is particularly true for the surgical management of solid organ malignancies. Comparative effectiveness is a relatively new term which encompasses the age-old concepts of how best to treat cancer patients. Comparative effectiveness is defined as the direct comparison of healthcare interventions to determine which work best for which patients when considering the benefits and risks. The Institute of Medicine has defined comparative effectiveness research (CER) as the generation and synthesis of evidence that compares the benefits and harms of alternative methods to prevent, diagnose, treat, and monitor a clinical condition or to improve the delivery of care. CER is certainly best done with well-conducted randomized controlled trials. Unfortunately, clinical trials are not always feasible owing to the impracticality of conducting the trial, the considerable cost, and the time required to complete the trial. These challenges are even more pronounced with respect to surgical treatment. Thus, alternative approaches may need to be considered in order to address pressing questions in the care of the oncology patient. These approaches may include well-conducted retrospective cohort studies from cancer registries and other data sources, decision and cost effectiveness analyses, and other novel methodologies. This book lays out the current critical questions for each major malignancy and proposes approaches to gain answers to these pressing questions.

Complex General Surgical Oncology Carl Schmidt, Mary Garland Kledzik, 2025-07-25
 Aimed for surgeons specializing in Complex General Surgical Oncology CGSO this work intends to help the reader prepare for board examinations and guide decision making
 Chapters focus on key content with an emphasis on evidence based medical decision making
 A supplemental section provides challenging scenarios
 The book uniquely uses outlines and bullet points instead of prose
 Chapters provide objective numbers that reflect a thorough understanding of each topic and are a valuable resource
 We hope these will also aid the surgeon during patient conversations while early in their practice

Multidisciplinary Care of the Cancer Patient , An Issue of Surgical Oncology Clinics Gregory A. Masters, 2013-04-28
 This issue of the Surgical Oncology Clinics of North America Guest Edited by Dr Greg Masters will highlight the multi disciplinary approach to a variety of common malignancies focusing on how surgical oncologists work together with medical oncologists and radiation oncologists to provide the most up to date management for many different malignancies
 It will focus on the latest data from updates in basic science and clinical trials including the importance of new technology and surgical techniques new radiation techniques and the latest in chemotherapy biologic and targeted drug development in the multidisciplinary care of cancer patients

Surgical Oncology David L Bartlett, Pragasheeshwar Thirunavukarasu, Matthew D Neal., Phil Bao, 2011-03-31
 Written by world renowned experts in surgical oncology this book examines various types of cancer and their treatment options based on Level of Evidence tables
 The text provides an up to date review of the knowledge required by surgical oncologists from basic biology to the application of regional chemotherapy minimally invasive surgery and palliative care
