

- Mixing and Separating Materials -

Mixing & Separating Materials

Different materials will often need to be mixed together or sometimes they are already mixed together and need to be separated. There are a number of different ways to mix and separate materials.

Mixing and separating materials

Soluble

Substances that dissolve in water, like salt, sugar and instant coffee, are called soluble substances.

These substances dissolve completely in water to make a solution.

Mixing and separating materials

Dissolving

Some solids or substances dissolve in water when you mix them together. When a substance dissolves, it looks like it has disappeared. However, although the substance cannot be seen, it is still there as it has just mixed with the water to make a solution.

Mixing and separating materials

Sieving

If there is a mixture of large solid particles and small solid particles, for example stones and soil, they can be separated by sieving.

Mixing and separating materials

Filtering

A mixture of water and a solid like sand can be separated by filtering. The mixture of sand and water is poured into the filter funnel, which is lined with filter paper. The water can pass through the paper to collect in the beaker. The sand particles cannot pass through the filter paper and instead collect in the filter funnel.

Mixing and separating materials

Evaporation

Evaporation is good for separating a liquid from a solution. For example, the salt from salty water can separate from the water by boiling the solution. The water will evaporate until it is all gone. The salt will be left behind. If we collect the water vapour that evaporates we can cool it to form water again.

Separating Materials

Marco Cascella

Separating Materials:

Separating Materials Robert Snedden, 2007-08-25 How can trickles of surface water dissolve rock and create huge caves underground What are colloids and why are they floating in the milk you drink How do we make sure that the water that comes from the tap is clean and safe In this book you will learn the different states in which materials can be found and the various separation techniques scientists use to obtain the materials they want Find out what a huge part the material world plays in your life Each book in the Material World series looks at a key area of materials science covering subjects such as states of matter material characteristics and behavior the uses of different materials and the technology used to make new materials or change existing ones for new purposes

Membrane Materials for Gas and Separation Yuri Yampolskii, E. Finkelshtein, 2017-01-10 Si containing polymers have been instrumental in the development of membrane gas separation practices since the early 1970s Their function is to provide a selective barrier for different molecular species where selection takes place either on the basis of size or on the basis of physical interactions or both Combines membrane science organosilicon chemistry polymer science materials science and physical chemistry Only book to consider polymerization chemistry and synthesis of Si containing polymers both glassy and rubbery and their role as membrane materials Membrane operations present environmental benefits such as reduced waste and recovered recycled valuable raw materials that are currently lost to fuel or to flares
