Greenwood, Thomas M. McMillan, Michael P. Barnes, Christopher D. Ward, 2005-08-16 Changes in the focus of neurological practice worldwide have led to the need for new standard texts that reflect the current state of this expanding area of clinical expertise The second edition of the Handbook of Neurological Rehabilitation is a major reference source that fulfils this need providing an invaluable resource for all professions that work with patients suffering from neurological disorders It brings restorative neurology to the bedside and shows how a reiterative goal oriented problem solving training programme can benefit patients sometimes on a scale not achieved by pharmacological or surgical interventions The book is divided into three sections all of which have been updated Section One explores the clinical and biological principles underpinning rehabilitation practice in the context of neurological disablement Section Two describes the assessment treatment and management of the major physical cognitive and behavioural impairments and the resulting functional deficits that may follow or accompany neurological disease The final section explores in more detail these problems and their management in relation to the more common specific disorders of the nervous system The text emphasises the fact that rehabilitation is an ongoing process involving multidisciplinary problem solving goal setting and education in which organised care is more effective than unorganised care and the breakdown of professional barriers within rehabilitation to facilitate the use of combined treatment techniques improves outcome It describes the contribution made by neural reorganisation and compensatory mechanisms to recovery of function focuses on the avoidance of secondary deficit and explores the physical cognitive affective and behavioural problems that may occur after neurological damage At a time when new medical technologies threaten to fragment the integrity of medical care at individual and societal levels it is crucial that all those involved in the management of chronic neurological disease have a working knowledge of the contents of this book Their perspective on clinical practice will then be truly integrated and holistic and their patients will benefit accordingly

Spasticity Management Valerie Stevenson, Louise Jarrett, 2006-07-26 Spasticity is a common symptom seen in many neurological conditions notably head injury spinal cord injury stroke cerebral palsy and multiple sclerosis It is also the dominant feature in a number of rarer conditions such as tropical and hereditary spastic paraparesis HSP The fact that it is

relevant to many chronic neurological conditions and that the absence of multi disciplinary input can result in progressive disability ensures spasticity management is a prominent feature in the current National Service Framework NSF for long term neurological conditions In the future more long term care for such patients will be done in primary care and the community It is therefore essential that a multi disciplinary approach is used with successful liaison between secondary primary and social care Optimum management of spasticity is dependent on an understanding of its underlying physiology an awareness of its natural history an appreciation of the impact on the patient and a comprehensive approach to minimising that impact which is both multi disciplinary and consistent over time Regrettably these essential requirements are rarely met and consequently inadequately managed spasticity results in a range of painful and disabling sequelae which with the right approach are for the most part preventable Although there are several excellent publications looking at this area none are a truly practical guide relevant to all members of the multi disciplinary team involved in spasticity management Anyone who has been involved in setting up a new service knows how difficult and how protracted a process this can be and if it has been done before why reinvent it The basis of this manual is to collect together the experience and knowledge of such a team who have worked in this area for 10 years now It pulls together all areas including how to set up and develop a service as well as useful management strategies On a practical note it includes complete copies of all of our patient information assessment proformas protocols for different interventions nursing care plans and an integrated care pathway for outpatient spasticity management both as hard copy but also on CD ROM to aid in reproduction These protocols are of course specific to our team but could easily be adapted for use in other centres We are not saying this is the right or only way to run a spasticity service and there is certainly room for improvement but we hope by sharing our experience we can help others to develop their own service thus improving management for all individuals with spasticity
