Signals Noise And Active Sensors:

Signals, Noise, and Active Sensors John Minkoff, 1992-03-18 Sonar radar and laser radar have evolved to the point where many commercial scientific and military applications exist for these sensing systems Each of these sensors involves problems peculiar to themselves Deals with solutions to the problems currently associated with signal detection by the application of a variety of subsets of Communication and Estimation Theory Covers such topics as noise and random processes noise statistics how to detect signals in noise waveform analysis non coherent detection of a single pulse and more **Signal**

Processing Fundamentals and Applications for Communications and Sensing Systems John Minkoff, 2002 This cutting edge book is a clear and thorough exposition of signal processing fundamentals for communications and major sensing systems Based on the author's earlier book in this area this revised and expanded resource offers you expert guidance in the detection of optical acoustic and radio frequency signals in noise It covers digital filtering and parameter estimation and helps you with problems associated with radar system design including search tracking and measurement ambiguity *Signal Processing for Intelligent Sensor Systems with MATLAB, Second Edition* David C. Swanson, 2012

Building on the unique features that made the first edition a bestseller this second edition includes additional solved problems and web access to the large collection of MATLABTM scripts that are highlighted throughout the text The book offers expanded coverage of audio engineering transducers and sensor networking technology It also includes new chapters on digital audio processing as well as acoustics and vibrations transducers The text addresses the use of meta data architectures using XML and agent based automated data mining and control The numerous algorithms presented can be applied locally or network based to solve complex detection problems **Active Sensors For Local Planning In Mobile**

Robotics Penelope Probert Smith, 2001-12-05 This book describes recent work on active sensors for mobile robots An active sensor interacts with its surroundings to supply data on demand for a particular function gathering and abstracting information according to need rather than acting as a generic data gatherer Details of the physical operation are hidden The book deals mainly with active range sensors which provide rapid information for local planning describing extraction of two dimensional features such as lines corners and cylinders to reconstruct a plan of a building It is structured according to the physical principles of the sensors since to a large extent these determine the function of the sensors and the methods of processing Recent work using sonar optoelectronic sensors and radar is described Sections on vision and on sensor management develop the idea of software adaptation for efficient operation in a changing environment *Signal Processing*

for Intelligent Sensor Systems with MATLAB® David C. Swanson, 2011-07-21 Signal Processing for Intelligent Sensors with MATLAB Second Edition once again presents the key topics and salient information required for sensor design and application Organized to make it accessible to engineers in school as well as those practicing in the field this reference explores a broad array of subjects and is divided into sections **Signal Processing for Intelligent Sensor Systems**

David C. Swanson, 2000-04-18 Integrates a broad range of physics algorithms and sensing techniques for development of intelligent systems Highlights adaptive least squared error modeling Covers complex sampling physical system modeling using digital filters frequency domain processing beamforming and much more **Active Control of Noise and Vibration**

Colin Hansen, Scott Snyder, Xiaojun Qiu, Laura Brooks, Danielle Moreau, 2012-11-02 Integrating active control of both sound and vibration this comprehensive two volume set combines coverage of fundamental principles with the most recent theoretical and practical developments The authors explain how to design and implement successful active control systems in practice and detail the pitfalls one must avoid to ensure a reliable and stable system Extensively revised updated and expanded throughout the second edition reflects the advances that have been made in algorithms DSP hardware and applications since the publication of the first edition *Waveform Design for Active Sensing Systems* Hao He, Jian Li, Petre Stoica, 2012-07-12 Ideal for researchers and practitioners looking to develop and use computational algorithms for waveform design in diverse active sensing applications **Image Processing for Remote Sensing** C.H. Chen, 2007-10-17 Edited by leaders in the field with contributions by a panel of experts Image Processing for Remote Sensing explores new and unconventional mathematics methods The coverage includes the physics and mathematical algorithms of SAR images a comprehensive treatment of MRF based remote sensing image classification statistical approaches for **Sensors and Actuators**

Clarence W. de Silva, 2015-07-30 This introductory textbook on engineering system instrumentation emphasizes sensors transducers actuators and devices for component interconnection The book deals with instrumenting an engineering system through the incorporation of suitable sensors actuators and associated interface hardware including filters amplifiers and other signal modifiers In view of the practical considerations design issues and industrial techniques that are presented throughout the book and in view of the simplified and snap shot style presentation of more advanced theory and concepts it also serves as a useful reference for engineers technicians project managers and other practicing professionals in industry and in research laboratories
