Moving Frontiers in Veterinary Immunology R. Pandey, 1988 Histophysiology of the Immune System Sigbjørn Fossum, Bent Rolstad, 2012-12-06 The 9th International Conference on Lymphatic Tissues and Germinal Centres in Immune Reactions was held in Oslo 9-14 August 1987 These conferences by the regular devotees just referred to as the germinal centre conferences or GCC have been held regularly at roughly three year intervals since 1966 The credo of these conferences is in vivo veritas signifying that investigating components like molecules and cells only gives partial truth The components must ultimately be explored in their natural context to see how they interact with other parts and are integrated to a whole To the biologist it is obvious that the world must be investigated at many different levels of organization At each level the patterns observed represent just some of many possible ways of putting together the elements of the lower levels These patterns are not predetermined but the results of evolution i.e. of a history in which stochastic processes play a major role The organic world can therefore not be torn apart and then reconstructed from basic principles alone This realization is often expressed as the whole being more than the sum of its parts Biology of the Mammary Gland John A. Mol, Roger A. Clegg, 2006-04-11 Proceedings of the European Cooperation in the Field of Scientific and Technical Research COST 825 Symposium on Mammary Gland Biology held September 16-18 1999 in Tours France It is difficult to overstate the evolutionary and functional significance of mammary tissue in biology Substantial progress has been made by researchers in various disciplines particularly over the last fifteen years towards realizing the potential of this tissue to yield powerful experimental models for morphogenesis and tissue development for cellular differentiation for the biosynthesis and secretion of proteins lipids small molecules and inorganic salts and for the coordination and regulation of these processes More recently the possibility of exploiting the secretory epithelial cells of mammary tissue as cell factories has become a reality and the recombinant production by lactating animals of an increasing number of proteins valuable both in the pharmaceutical and nutraceutical fields is in progress or under development Also in this sphere of agricultural production genetic as well as nutritional technologies are under investigation and exploitation to optimize milk composition for various end uses for instance in food process and manufacture The possibilities of deriving health benefit from the bioactive properties of some of the minor constituents of milk are emerging to counter the highly publicized negative health impact of excessive consumption of saturated animal fats In human nutrition and medicine the mammary gland is both a source of nutrition to the neonate and a potential health threat to the adult female breast cancer remains the major single cause of female mortality in most developed countries This volume provides a unique glimpse into our understanding at the cutting edge of a variety of disciplines of this versatile and extraordinary tissue at the birth of the twenty first century Milking and Milk Production of Dairy Sheep and Goats F Barillet, N P Zervas, 1999-07-25 The 6th Symposium on the Milking of Small Ruminants was held in Athens Greece September 26-October 1 1998 While maintaining the specificity of the presentations

focusing on hand or machine milking of small ruminants the symposium also incorporated new topics related to milking somatic cell counts and mammary infections new approaches for evaluating the internal morphology of the mammary gland and automatic recording of milk emission kinetics using electronic devices The proceedings cover the six main topics Physiological aspects of milk secretion Mammary pathology and milking Milking machine and milking management Milking and dairy productions systems Milk recording and genetics Milking and milk quality Cumulated Index Medicus ,1990
