Pae, 2020-10-14 This open access volume reveals the hidden power of the script we read in and how it shapes and drives our minds ways of thinking and cultures Expanding on the Linguistic Relativity Hypothesis i.e. the idea that language affects the way we think this volume proposes the Script Relativity Hypothesis i.e. the idea that the script in which we read affects the way we think by offering a unique perspective on the effect of script alphabets morphosyllabaries or multi scripts on our attention perception and problem solving Once we become literate fundamental changes occur in our brain circuitry to accommodate the new demand for resources The powerful effects of literacy have been demonstrated by

research on literate versus illiterate individuals as well as cross scriptal transfer indicating that literate brain networks function differently depending on the script being read This book identifies the locus of differences between the Chinese Japanese and Koreans and between the East and the West as the neural underpinnings of literacy To support the Script Relativity Hypothesis it reviews a vast corpus of empirical studies including anthropological accounts of human civilization social psychology cognitive psychology neuropsychology applied linguistics second language studies and cross cultural communication It also discusses the impact of reading from screens in the digital age as well as the impact of bi script or multi script use which is a growing trend around the globe As a result our minds ways of thinking and cultures are now growing closer together not farther apart **The Musical World** ,1854 American Book Publishing Record ,1985
