The Loss of Sadness Allan V. Horwitz, Jerome C. Wakefield, 2007-06-18 Depression has become the single most commonly treated mental disorder amid claims that one out of ten Americans suffer from this disorder every year and 25% succumb at some point in their lives Warnings that depressive disorder is a leading cause of worldwide disability have been accompanied by a massive upsurge in the consumption of antidepressant medication widespread screening for depression in clinics and schools and a push to diagnose depression early on the basis of just a few symptoms in order to prevent more severe conditions from developing In *The Loss of Sadness* Allan V Horwitz and Jerome C Wakefield argue that while depressive disorder certainly exists and can be a devastating condition warranting medical attention the apparent epidemic in fact reflects the way the psychiatric profession has understood and reclassified normal human sadness as largely an abnormal experience With the 1980 publication of the landmark third edition of the Diagnostic and Statistical Manual of Mental Disorders DSM III mental health professionals began diagnosing depression based on symptoms such as depressed mood loss of appetite and fatigue that lasted for at least two weeks This system is fundamentally flawed the authors maintain because it fails to take into account the context in which the symptoms occur They stress the importance of distinguishing between abnormal reactions due to internal dysfunction and normal sadness brought on by external circumstances Under the current DSM classification system however this distinction is impossible to make so the expected emotional distress caused by upsetting events for example the loss of a job or the end of a relationship could lead to a mistaken diagnosis of depressive disorder Indeed it is this very mistake that lies at the root of the presumed epidemic of major depression in our midst In telling the story behind this phenomenon the authors draw on the 2 500 year history of writing about depression including studies in both the medical and social sciences to demonstrate why the DSM's diagnosis is so flawed They also explore why it has achieved almost unshakable currency despite its limitations Framed within an evolutionary account of human health and disease *The Loss of Sadness* presents a fascinating dissection of depression as both a normal and disordered human emotion and a sweeping critique of current psychiatric diagnostic practices The result is a potent challenge to the diagnostic

Evolutionary psychology has recently made inroads in clinical psychology bringing the understanding that in some cases mental symptoms are not manifestations of brain disorders but rather evolved mechanisms that might function in overdrive or signal fitness problems. Thus improvements in fitness may lead to improvements in those symptoms. Armed with such insights, this brief describes a comprehensive therapy protocol for depression: Cognitive Evolutionary Therapy (CET), which incorporates evolutionary understandings of this condition into well validated cognitive techniques. CET starts with an evaluation of the evolutionary fitness of an individual which represents the springboard for specific evolutionary driven behavioral and cognitive interventions. Based on the fitness evaluation which takes place at intake, the CET therapist comes pre equipped with a list of the patient's fitness problems and can start working on them very early on in therapy, potentially leading to shorter interventions and cost savings. This brief will appeal to clinical psychologists and therapists who frequently employ CBT principles in therapy as well as to clinicians who want to incorporate insights from evolutionary disciplines into their approaches.
