Essays on Strategy Analysis for Seaports Elvira Haezendonck, 2001 The increasingly competitive market environment in which port clusters operate today imposes new requirements on port strategy analysis Many port authorities and port operators now realize that a static approach to cost leadership a sole focus on inherited factor advantages and a simplistic reliance on new infrastructure to attract or retain clients are no longer sufficient to guarantee a port's competitive success They need to offer greater value added to port users as well as to society Hence this new market environment forces ports to reconsider their present strategic position and to reflect on the strategic options for the future The book builds upon an in depth survey of economic actors in the Antwerp seaport cluster with a specific focus on the container and conventional cargo clusters It attempts to answer the question why these particular port clusters are more competitive than similar clusters in other ports In order to answer this question the study develops and extends a number of formal tools of strategy analysis that should be useful to both port authorities and port operators

**Maritime Economics in Historical Perspective** Ayodeji Olukoju, Daniel Castillo Hidalgo, 2020-07-14 This book updates African maritime economic history to analyse the influence of seaports and seaborne trade processes of urbanization and development and the impact of globalization on port evolution within the different regions of Africa It succeeds the seminal

collection edited by Hoyle Hilling which was conceived during a phase of sustained economic growth on the African continent and builds on a similar trend where African economies have experienced processes of economic growth and the relative improvement of welfare conditions. It provides valuable insights on port evolution and the way the maritime sector has impacted the hinterland and the regional economic structures of the affected countries including the several and varied agents involved in these activities. **African Seaports and Maritime Economics in Historical Perspective** will be useful for economists, historians and geographers interested in African and maritime issues as well as policy makers interested in path dependence and long term analysis.

**The Routledge History of the Modern Maritime World since 1500** Kenneth Morgan, 2025-05-01. The Routledge History of the Modern Maritime World since 1500 provides a wide ranging set of chapters covering the sixteenth century to the present which represent the main lines of current enquiry in maritime history. Over the past half century maritime history has become a significant sub field of historical research that intersects with broader historical concerns such as oceanic history, global patterns of production and consumption and the maritime heritage industry. Informed by original research, an engagement with current historiographical concerns and a global geographical reach, the book is divided into sections covering shipping, ports, merchants and trade, maritime environments, coastal zones and the human dimension. Chapters focus on different countries across different ranges of time and also with different methodological approaches. The six sections of this book show the significant areas central to the study and understanding of the modern maritime world and collectively they highlight the areas in which the themes pursued by maritime historians have advanced and are currently moving. This book will appeal to various academic audiences: students will find chapters dealing with major topics in maritime history that will help them in their courses; for professional scholars in history, archaeology, heritage studies, historical sociology and economics, chapters outline some of the latest research in the field.
