Searching For Equity Conceptions Of Justice And Equity In Peasant Irrigation:

Searching for Equity Rutgerd Boelens, Gloria Dávila, Rigoberta Menchú, 1998 *Hydrosocial Territories and Water Equity* Rutgerd Boelens, Ben Crow, Jaime Hoogesteger, Flora E. Lu, Erik Swyngedouw, Jeroen Vos, 2017-06-01 Bringing together a multidisciplinary set of scholars and diverse case studies from across the globe this book explores the management governance and understandings around water a key element in the assemblage of hydrosocial territories Hydrosocial territories are spatial configurations of people institutions water flows hydraulic technology and the biophysical environment that revolve around the control of water Territorial politics finds expression in encounters of diverse actors with divergent spatial and political geographical interests as a result water in justice and in equity are embedded in these socio ecological contexts The territory building projections and strategies compete superimpose and align to strengthen specific water control claims of various interests As a result actors continuously recompose the territory s hydraulic grid cultural reference frames and political economic relationships Using a political ecology focus the different contributions to this book explore territorial struggles demonstrating that these contestations are not merely skirmishes over natural resources but battles over meaning norms knowledge identity authority and discourses The articles in this book were originally published in the journal *Water International*

Water Justice and Groundwater Subsidies in India Gayathri D. Naik, 2024-07-23 This book examines the impact of water related subsidies on social and distributive equity and environmental sustainability in groundwater access and regulation in India This book argues that adopting a water justice framework is essential to ensure equitable and sustainable access to and regulation of groundwater by balancing anthropogenic and ecological water needs The inherent inequity resulting from property rights controlled groundwater access gets widened by the social political and economic factors determining the subsidy beneficiaries Adopting a socio legal approach this book draws on two contrasting case studies in India Kerala a water secure state and Rajasthan an arid state Arguing for a shift to a new paradigm in water governance it critically examines the feasibility of the public trust doctrine and rights of nature discourse to analyse the best suitable regulatory framework that can balance the human right to water and ecological sustainability in groundwater resources It demonstrates the feasibility of adopting various environmental law principles that balance human rights to water and nature It argues that the hitherto highlighted public trust doctrine cannot address these inequities due to its anthropogenic bias and property rights link This book examines the applicability of the rights of nature discourse instead of these property rights based regulations to incorporate and mainstream the concerns of aquifer protection in water governance This book shall be of great interest to students scholars and practitioners of water law and policy environmental law water and social justice development studies and political ecology

Out of the Mainstream Rutgerd Boelens, David Getches, Armando Guevara-Gil, 2010-02-26 Water is not only a source of life and culture It is also a source of power conflicting interests and identity battles Rights to materially access culturally organize and politically control water

resources are poorly understood by mainstream scientific approaches and hardly addressed by current normative frameworks. These issues become even more challenging when law and policy makers and dominant power groups try to grasp, contain and handle them in multicultural societies. The struggles over the uses, meanings and appropriation of water are especially well illustrated in Andean communities and local water systems of Peru, Chile, Ecuador and Bolivia as well as in Native American communities in south western USA. The problem is that throughout history these nation states have attempted to civilize and bring into the mainstream the different cultures and peoples within their borders instead of understanding context and harnessing the strengths and potentials of diversity. This book examines the multi scale struggles for cultural justice and socio economic re distribution that arise as Latin American communities and user federations seek access to water resources and decision making power regarding their control and management. It is set in the dynamic context of unequal globalizing power relations, politics of scale and identity, environmental encroachment and the increasing presence of extractive industries that are creating additional pressures on local livelihoods. While much of the focus of the book is on the Andean Region, a number of comparative chapters are also included. These address issues such as water rights and defence strategies in neighbouring countries and those of Native American people in the southern USA as well as state reform and multi culturalism across Latin and Native America and the use of international standards in struggles for indigenous water rights. This book shows that against all odds people are actively contesting neoliberal globalization and water power plays. In doing so they construct new hybrid water rights systems, livelihoods, cultures and hydro political networks and dynamically challenge the mainstream powers and politics.

Water Security, Justice and the Politics of Water Rights in Peru and Bolivia Miriam Seemann, 2016-04-08. The author scrutinizes the claim of policy makers and experts that legal recognition of local water rights would reduce water conflict and increase water security and equality for peasant and indigenous water users. She analyzes two distinct top down and bottom up formalization policies in Peru and Bolivia: neoliberal the former, indigenist socialist the latter. The policies have intended and unintended consequences and impact on marginalized peasants and the complex inter legal systems for providing water security on the ground. This study seeks to debunk the official myth of the need to create state centric top down legal security in complex pluralistic water realities. The engagement between formal and alternative water securities and controversial notions of rightness is interwoven and contested. A complex setting is unveiled that forbids one size fits all solutions. Peru's and Bolivia's case studies demonstrate how formalization policies while aiming to enhance inclusion in practice actually reinforce exclusion of the marginalized. Water rights formalization is certainly no panacea.
