**Metacognition and Cognitive Neuropsychology** Giuliana Mazzoni, Thomas O. Nelson, 2014-05-12 Control processes are those mental functions that allow us to initiate monitor and prioritize mental activities They are crucial to normal mental functioning A better understanding of

the nature of control processes and their deficits is important for clinical work and for an adequate theory of consciousness. Previously control processes have been examined within the frameworks of two parallel but independent paradigms: those of cognitive psychology and of neuropsychology. Cognitive psychologists have stressed the theoretical and empirical nature of normal unimpaired control processes; neuropsychologists have focused on the relationships between damage to specific functional areas of the brain and deficits in specific control processes. Both have contributed extensively to our understanding of control processes. However, they have tended to operate independently with little if any cross talk between disciplines despite the potential benefits such dialogue is likely to generate. This book represents the first attempt to synthesize cognitive and neuropsychological perspectives on control processes. It contains state-of-the-art reports on various aspects of control processes by experts from both disciplines.

Then in each succeeding chapter the themes are introduced at the beginning of the chapter in a set of Thematic Questions woven into the chapter material and summarized at the end in Themes in Review. New features have been added to this edition to create a more exciting and visually enhanced text.

Advances in Traffic Psychology Mark Sullman, 2019-07-23 Traffic psychology is a rapidly expanding and broad field within applied psychology with a considerable volume of research activities and a growing network of academic strands of enquiry. The discipline primarily focuses on the behaviour of road users and the psychological processes underlying these behaviours, looking at issues such as cognition, distraction, fatigue, personality, and social aspects, often delivering practical applications and educational interventions. Traffic psychology has been the focus of research for almost as long as the motor car has been in existence and was first recognised as a discipline in 1990 when the International Association of Applied Psychology formed Division 13 Traffic and Transportation Psychology. The benefits of understanding traffic psychology are being increasingly recognised by a whole host of organisations keen to improve road safety or minimise health and safety risks when travelling in vehicles. The objective of this volume is to describe and discuss recent advances in the study of traffic psychology with a major focus on how the field contributes to the understanding of at-risk road user behaviour. The intended readerships include road safety researchers from a variety of different academic backgrounds, senior practitioners in the field including regulatory authorities, the private and public sector personnel, and vehicle manufacturers concerned with improving road safety.

*National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1983      50 Years Of Social Issues In Singapore David Chan, 2015-04-15 The social context of Singapore is changing rapidly and understanding how people think, feel and behave in various situations has become a key driver of effectiveness in addressing social issues. 50 Years of Social Issues in Singapore provides a comprehensive review and examination of various social issues at multiple levels of analysis, including the individual, group and society. This invaluable book adopts a translational approach to social issues in Singapore by explicitly bridging intellectual and practical perspectives. Contributed by a distinguished team of authors, the chapters examine the critical ideas underlying public debates of social issues and their policy and practical implications. The book is organized into three parts. Part I examines issues of population and social fundamentals in Singapore such as ageing, marriage, urban planning, healthcare and racial and religious harmony. Part II analyses Singapore's social progress through issues of inclusivity such as social mobility, developing communities and marginal groups that deserve more attention. Part III focuses on core principles and social processes related to social justice, doing good, social media and approaches to understanding and addressing social issues in Singapore. Most importantly, the chapters in this book clearly identify many of the critical unresolved and emerging questions on various social issues that will guide the next generation of public discussion and policy deliberations on what matters in Singapore.      Sg-Experimental Psych Richard Paul Donovan, 2004-08
