Ivanov, Jordanka Borissova, 2007-08-01 For every galaxy in the field or in clusters there are about three galaxies in groups The Milky Way itself resides in a group and groups can be found at high redshift The current generation of 10 m class telescopes and space facilities allows the observation of the members of nearby groups with exquisite detail and their properties can be correlated with the global properties of their host group Groups in the local Universe offer us the chance to study galaxies in environments characterized by strong interactions In the cosmological context groups trace large scale structures better than clusters and the evolution of groups and clusters appears to be related All these aspects of research on groups of galaxies are summarized in this book written by scientists working in various fields 2008 Comic Book Checklist & Price Guide Maggie Thompson, Brent Frankenhoff, Peter Bickford, 2007-10-08 Did you know that comic books are being promoted by noted organizations including American Library Association and many educators as a tool for engaging young readers 2003 CERN-CLAF School of High-Energy Physics European Organization for Nuclear Research, 2006 *Relativity, Gravitation and Cosmology* Ta-Pei Cheng, 2009-11-07 Einstein's general theory of relativity is introduced in this advanced undergraduate and beginning graduate level textbook Topics include special relativity in the formalism of Minkowski's four dimensional space time the principle of equivalence Riemannian geometry and tensor analysis Einstein field equation as well as many modern cosmological subjects from primordial inflation and cosmic microwave anisotropy to the dark energy that propels an accelerating universe The author presents the subject with an emphasis on physical examples and simple applications without the full tensor apparatus The reader first learns how to describe curved spacetime At this mathematically more accessible level the reader can already study the many interesting phenomena such as gravitational lensing precession of Mercury's perihelion black holes and

cosmology The full tensor formulation is presented later when the Einstein equation is solved for a few symmetric cases Many modern topics in cosmology are discussed in this book from inflation cosmic microwave anisotropy to the dark energy that propels an accelerating universe Mathematical accessibility together with the various pedagogical devices e g worked out solutions of chapter end problems make it practical for interested readers to use the book to study general relativity and cosmology on their own
