Modelling And Methodologies For Enterprise Integration:

Modelling and Methodologies for Enterprise Integration Peter Bernus, Laszlo Nemes, 2013-03-09 Enterprise integration and enterprise engineering has become a focal point of discussions during the past few years with active contribution of many disciplines The evolution from the concept of CAD CAM through CIM to the Integrated Enterprise is based on the assumption that the integrated enterprise can and should be engineered just as any complex system can **Modelling and Methodologies for Enterprise Integration** Peter Bernus, Laszlo Nemes, 2014-01-15 Enterprise Integration Modeling Charles J. Petrie, 1992 The goal of enterprise integration is the development of computer based tools that facilitate coordination of work and information flow across organizational boundaries These proceedings the first on EI modeling technologies provide a synthesis of the technical issues involved describe the various approaches and where they overlap complement or conflict with each other and identify problems and gaps in the current technologies that point to new research The leading edge of a movement that began with computer aided design computer aided manufacturing CAD CAM EI now seeks to engage the development of computer based tools to control not only manufacturing but the allied areas of materials supply accounting and inventory control EI technology is pushing forward research in areas such as distributed AI concurrent engineering task coordination human computer interaction and distributed planning and scheduling These proceedings provide the first common technical ground for comparing evaluating or coordinating these efforts Charles J Petrie Jr is Senior Member of Technical Staff at MCC in Austin Texas Topics include Computer Integrated Manufacturing Open System Architecture Standards The results of five workshops on EI modeling topics Model Integration Model Application Namespace Heterogeneous Execution Environments Metrics and Methodologies and Coordination Process Models **Enterprise Modeling** Asbjørn Rolstadås, B. Andersen, 2012-12-06 Enterprise Modeling Improving Global Industrial Competitiveness gives an overview of the current state of the art in enterprise modeling and its application Enterprise modeling is both a concept and a tool that is highly developed at the research level but which still promises many new industrial applications Enterprise models constitute a theoretical basis for the information system in an enterprise and are regarded by many as a substantial opportunity to improve global industrial competitiveness Enterprise Modeling Improving Global Industrial Competitiveness gives the reader an understanding of enterprise modeling as a concept and provides examples of its application by describing some of the currently available tools It is organized in five parts overview and international trends the basis of enterprise modeling application areas implementation and industrial experience with enterprise modeling Enterprise Modeling Improving Global Industrial Competitiveness is useful to developers of business information systems users of technical information systems engineers within operations management and engineers and economists dealing with performance assessment and improvement Enterprise Modeling Improving Global Industrial Competitiveness is suitable as a secondary text for a graduate level course and as a reference for researchers and

and more cost effectively than competitors to gain and keep the competitive advantage Computer aided design CAD computer aided engineering CAE and computer aided manufacturing CAM are now the industry standard in all major industries The seven volumes in Computer Aided Design Engineering and Manufacturing Systems Techniques and Manufacturing provide a comprehensive treatment of the techniques and applications of CAD CAE and CAM Advanced Intelligent Computing Theories and Applications De-Shuang Huang,Yong Gan,Phalguni Gupta,M. Michael Gromiha,2012-01-05 This book constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Intelligent Computing ICIC 2011 held in Zhengzhou China in August 2011 The 94 revised full papers presented were carefully reviewed and selected from 832 submissions The papers are organized in topical sections on intelligent computing in scheduling local feature descriptors for image processing and recognition combinatorial and numerical optimization machine learning theory and methods intelligent control and automation knowledge representation reasoning and expert systems intelligent computing in pattern recognition intelligent computing in image processing intelligent computing in computer vision biometrics with applications to individual security forensic sciences modeling theory and applications of positive systems sparse manifold learning methods and applications advances in intelligent information processing **Enterprise Networks and Logistics for Agile Manufacturing** Lihui Wang,S.C. Lenny Koh,2010-07-24 Enterprise Networks and Logistics for Agile Manufacturing presents a focused collection of quality chapters on state of the art research efforts in the areas of enterprise networks and logistics as well as their practical applications towards agile manufacturing With the increasing decentralisation of manufacturing systems and outsourcing of processes more robust and practical approaches and systems are needed to support agile manufacturing operations Enterprise Networks and Logistics for Agile Manufacturing consists of two major sections the first presents a broad based review of the key areas of research in enterprise networks and logistics the second focuses on an in depth treatment of a particular methodology or system relevant to the book title Examples include sustainable green supply chain value creation and supplier selection extended enterprise network management reverse logistics and innovative supply chain systems The authors take into account the need to pose intellectual challenges while retaining a balanced approach in terms of scope versus depth and theory versus applications Enterprise Networks and Logistics for Agile Manufacturing can be beneficial to academic researchers practicing engineers and managers and graduate students with an interest in any manufacturing sectors It can enable them to better understand the present state and future trends of research in this important area in order to position themselves strategically for future challenges as we enter the era of agile and distributed manufacturing Infrastructures for Virtual Enterprises Luis M. Camarinha-Matos,Hamideh Afsarmanesh,2013-03-09 The area of virtual organizations and industrial virtual enterprises in particular is attracting a large and growing interest both in terms of the research and development and the implementation of new business practices An ever increasing number of international projects and national initiatives have been launched

recently Most of the earlier efforts are focused on the development of supporting infrastructures although more and more initiatives now pursue the exploitation of this concept in business terms Being a recent research and development area and in spite of the mentioned interest there is a lack of a structured and comprehensive text that can be used as a reference source Most available literature is dispersed in several conference proceedings journals and book chapters This book represents an attempt towards such structured text Although the book was prepared in the framework of PRO VE 99 a working conference on infrastructures for virtual enterprises organized by the Esprit project PRODNET II and IFIP it has the goal of covering more generic VE requirements and addressing several other approaches and important aspects in this paradigm

Architectures for Enterprise Integration Peter Bernus,Laszlo Nemes,Theodore J. Williams,2013-04-17

Architectures for Enterprise Integration describes the latest methods to guide enterprises and consultants managers and technical personnel through a complete life cycle of enterprise development This book is based on the findings of the IFIP IFAC Task Force and presents the state of the art in enterprise architecture This book is essential reading for all practising engineers and researchers in manufacturing and engineering management with special interest for those involved in CIM and Enterprise Modelling and Integration
