Modern Aspects Of Species:

Species, Species Concepts and Primate Evolution William H. Kimbel, Lawrence B. Martin, 2013-12-18 A world of categories devolved of spirit waits for life to return Saul Bellow Humboldt's Gift The stock in trade of communicating hypotheses about the historical path of evolution is a graphical representation called a phylogenetic tree In most such graphics pairs of branches diverge from other branches successively marching across abstract time toward the present To each branch is tied a tag with a name a binominal symbol that functions as does the name given to an individual human being On phylogenetic trees the names symbolize species What exactly do these names signify What kind of information is communicated when we claim to have knowledge of the following types *Tetodonius mathewzi* was ancestral to *Pseudotetodonius ambiguus* The sample of fossils attributed to *Homo habilis* is too variable to contain only one species Interbreeding populations of savanna baboons all belong to *Papio anubis* *Hylobates lar* and *H. pileatus* interbreed in zones of geographic overlap While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species This is because oddly enough evolutionary biologists are quite far from agreement on what a species is how it attains this status and what role it plays in evolution over the long term

Modern Aspects of Species Kunio Iwatsuki, Peter H. Raven, Walter J. Bock, 1986-01-01 **Collected papers** William Bullock Clark, 1917 Endless Forms Daniel J. Howard, Stewart H. Berlocher, 1998 Speciation is one of the great themes of evolutionary biology It is the process through which new species are born and diversity generated Yet for many years our understanding of the process consisted of little more than a perception that if populations are isolated geographically they will diverge genetically and may come to form new species This situation began to change in the 1960s as an increasing number of biologists challenged the exclusivity of allopatric speciation and began to probe more deeply into the actual process by which divergence occurs and reproductive isolation is acquired This focus on process led to many new insights but numerous questions remain and speciation is now one of the most dynamic areas of research in modern evolutionary biology This volume presents the newest research findings on speciation bringing readers up to day on species concepts modes of speciation and the nature of reproductive barriers It also discusses the forces that drive divergence of populations the genetic control of reproductive isolation and the role played by hybrid zones and hybridization in speciation

Contemporary Bayesian and Frequentist Statistical Research Methods for Natural Resource Scientists Howard B. Stauffer, 2007-12-10 The first all inclusive introduction to modern statistical research methods in the natural resource sciences The use of Bayesian statistical analysis has become increasingly important to natural resource scientists as a practical tool for solving various research problems However many important contemporary methods of applied statistics such as generalized linear modeling mixed effects modeling and Bayesian statistical analysis and inference remain relatively unknown among researchers and practitioners in

this field Through its inclusive hands on treatment of real world examples Contemporary Bayesian and Frequentist Statistical Research Methods for Natural Resource Scientists successfully introduces the key concepts of statistical analysis and inference with an accessible easy to follow approach The book provides case studies illustrating common problems that exist in the natural resource sciences and presents the statistical knowledge and tools needed for a modern treatment of these issues Subsequent chapter coverage features An introduction to the fundamental concepts of Bayesian statistical analysis including its historical background conjugate solutions Bayesian hypothesis testing and decision making and Markov Chain Monte Carlo solutions The relevant advantages of using Bayesian statistical analysis rather than the traditional frequentist approach to address research problems Two alternative strategies the a posteriori model selection strategy and the a priori parsimonious model selection strategy using AIC and DIC to model selection and inference The ideas of generalized linear modeling GLM focusing on the most popular GLM of logistic regression An introduction to mixed effects modeling in S Plus and R for analyzing natural resource data sets with varying error structures and dependencies Each statistical concept is accompanied by an illustration of its frequentist application in S Plus or R as well as its Bayesian application in WinBUGS Brief introductions to these software packages are also provided to help the reader fully understand the concepts of the statistical methods that are presented throughout the book Assuming only a minimal background in introductory statistics Contemporary Bayesian and Frequentist Statistical Research Methods for Natural Resource Scientists is an ideal text for natural resource students studying statistical research methods at the upper undergraduate or graduate level and also serves as a valuable problem solving guide for natural resource scientists across a broad range of disciplines including biology wildlife management forestry management fisheries management and the environmental sciences

Natural Selection George C. Williams,1992-10-01 In this work George C Williams one of evolutionary biology s most distinguished scholars examines the mechanisms and meaning of natural selection in evolution Williams offers his own perspective on modern evolutionary theory including discussions of the gene as the unit of selection clade selection and macroevolution diversity within and among populations stasis and other timely and provocative topics In dealing with the levels of selection controversy he urges a pervasive form of the replicator vehicle distinction Natural selection he argues takes place in the separate domains of information and matter Levels of selection questions consequently require different theoretical devices depending on the domains being discussed In addressing these topics Williams presents a synthesis of his three decades of research and creative thought which have contributed greatly to evolutionary biology in this century Johns Hopkins University Circulars Johns Hopkins University,1916

Evolutionary and Genetic Biology of Primates V1 John Buettner-Janusch,2012-12-02 Evolutionary and Genetic Biology of Primates Volume I presents research on the evolution and genetic biology of the Primates This volume comprises seven chapters that tackle the problem of primate classification

anatomy and genetics The first chapter deals with an eventual serious reorganization of the classification of the Primates followed by a discussion on a critical reappraisal of tertiary primates from different periods such as Paleocene Eocene Oligocene Miocene and Pliocene The subsequent chapter examines the phylogenetic implications of neural structures in both morphological and physiological terms The book also presents comparative studies on the differences between skin of primates and that of man the sweat glands of the Lorisidae and the nerve endings in the skin of primates Lastly methods for primate chromosomes and their evolution are described This book is an invaluable source for physical anthropologists and researchers histologists anatomists neurologists geneticists cytologists and other specialists **Contributions to Geology**

Johns Hopkins University,1917 What the Bones Tell Us Jeffrey H. Schwartz,1997-12-01 An anthropologist who helped to unearth the ancient city of Carthage explains the new techniques used in physical anthropology that assist scientists in drawing conclusions about human origins and evolution from bones and artifacts **Discourses: Biological & Geological**

nature and the history of biology Reflecting his infectious enthusiasm for the best natural history the editor has excerpts from massive sources and intriguing pieces from lesser known authors Among the naturalists included are Pliny Frederick II Linnaeus White Bartram Waterton Thoreau Wallace Huxley Faber Theodore Roosevelt Digby Seton and Klingel Arranged in chronological order the small masterpieces here range from Aristotle to Rachel Carson Each excerpt is introduced by an incisive and sometimes humorous description of its author

The Major Prose of Thomas Henry Huxley Thomas Henry Huxley, 1997 Thomas Henry Huxley 1825-1895 was one of the intellectual giants of Victorian England A surgeon by training he became the principal exponent of Darwinism and popularizer of scientific naturalism Huxley was a prolific essayist and his writings put him at the center of intellectual debate in England during the later half of the nineteenth century The Major Prose of Thomas Henry Huxley fills a very real and pressing chasm in history of science books bringing together almost all of Huxley's major nontechnical prose including *Man's Place in Nature* and both *Evolution in Ethics* and its *Prolegomena*

The Scrophulariaceae of Eastern Temperate North America Francis Whittier Pennell, 1935 This study was originally planned to follow certain regional papers with a similar account of the family Scrophulariaceae figwort or foxglove family for the Middle Atlantic N Central States But it soon seemed preferable to include the southern Appalachians the whole Atlantic Coastal Plain The flora of the northern states has been profoundly modified by the glacial epoch any understanding of the composition distribution of our northern flora should also consider the adjoining southern territory where vegetation was little or not affected from which the north was again populated So it was decided to include again the South Atlantic the West Gulf States The plan of this study is both more thorough more comprehensive than earlier efforts Illus
