Modern Carbohydrate Chemistry:

Modern Synthetic Methods in Carbohydrate Chemistry Daniel B. Werz, Sebastien Vidal, 2013-12-23 The fields of glycochemistry and glycoscience are rich and varied and where much can be learned from Nature As Nature is not always able to produce carbohydrates in quantities useful for not only in research but also as therapeutic agents new ways need to be found to optimize the yield This book presents an overview of the latest developments in the field of carbohydrates ranging from de novo approaches via cyclodextrin chemistry to the synthesis of such highly complex glycoconjugates as glycosphingolipids and GPI anchors The main emphasis remains on the synthetic aspects making the book an excellent source of information for those already involved in carbohydrate chemistry as well as for those organic chemists who are beginners in this field Equally of interest to synthetic chemists as well as medicinal chemists and biochemists Modern Carbohydrate Chemistry Roger W. Binkley, 1988 Introduction Definitions Structural representation Stereochemical designation The D L system Naming of carbohydrates Conformational analysis Unprotected sugars Protecting groups Nucleophilic substitution reactions Oxidation reactions Hydrogenation and hydrogenolysis Addition reactions Elimination reactions Oligosaccharide syntheses **Aspects of Modern Carbohydrate Chemistry**, 1990 **Modern Organocatalyzed Methods in Carbohydrate Chemistry** Rainer Mahrwald, 2015-05-07 This brief presents a valuable and concise overview of organocatalytic methodologies in carbohydrate chemistry It includes glycosylation processes with de novo syntheses of carbohydrates and chain elongation of carbohydrates The author an academic of international distinction goes on to make comparisons between traditional organic and metalorganic transformations **Carbohydrates** Robert V. Stick, 2001-03-13 Addresses the field of carbohydrates from theoretical mechanistic and practical points of view topics covered include synthesis and protecting groups reactions of monosaccharides synthesis of the glycosidic linkage synthesis of oligosaccharides polysaccharides and glycoconjugates **Carbohydrate Chemistry Volume 45** Yves Queneau, Thisbe K. Lindhorst, Amelia Pilar Rauter, 2021-12-22 Carbohydrate Chemistry is an invaluable volume demonstrating the interdisciplinary nature of modern carbohydrate research and containing analysed evaluated and distilled information on the latest research in the area *Carbohydrate Chemistry: Fundamentals And Applications* Raimo Alen, 2018-03-13 This book presents a comprehensive approach to the versatile and fascinating field of carbohydrate chemistry It covers besides the colorful historical perspective within the utilization of carbohydrates and their derivatives all modern aspects on their properties nomenclature uses and natural occurrence as such or as residues in a variety of biologically active molecules Special emphasis is paid to various conversion techniques for producing value added chemicals biofuels and other products from carbohydrate rich renewable resources This book can be primarily used as an advanced textbook for a wide range of readers in many disciplines not only students and teachers but also everyone who works in the laboratory as a researcher or in production and planning or who generally needs relevant knowledge of carbohydrates Modern Methods in

Carbohydrate Synthesis Shaheer H. Khan,1996-03-01 Modern Methods in Carbohydrate Synthesis presents in one volume a sequence of chapters leading from classical methods through to today's newest state of the art technology for oligosaccharide synthesis. It places particular emphasis on the most recent breakthroughs in the field including emerging technologies for both oligosaccharide and glycoconjugate synthesis. Chapters describing the synthesis of increasingly important glycosidic linkage analogs as well as the oligosaccharides containing derivatives and analogs of natural sugars are included. While chemical synthetic methods constitute the major part of the book, completing the volume is a section on the rapidly expanding and important field of enzymatic synthesis, also covering combined chemical and enzymatic synthesis. Chapters are written by leading experts in the field. Wherever possible, methods of synthesis are provided in sufficient detail to allow the reader to implement the techniques described. More than 1700 references are provided in the 21 chapters comprising the book. This volume should provide a wealth of information to a large number of synthetic organic chemists, medicinal chemists, protein chemists, biochemists, glycobiologists, and cell biologists, including students in these fields.

Advances in Carbohydrate Chemistry, 1964-01-01 *Advances in Carbohydrate Chemistry* **Essentials of Carbohydrate Chemistry and Biochemistry** Thisbe K. Lindhorst, 2000-03-31 Thisbe K. Lindhorst *Essentials of Carbohydrate Chemistry and Biochemistry*. Carbohydrates are probably nature's most common product. Plants and algae biosynthesize millions of tons of them every year. Carbohydrates are stores of energy and structural building blocks; they are versatile enough to serve as encoders of biological information and, last but not least, they are involved in recognition processes at a molecular level. Research into carbohydrate and glycoconjugate functions in cell-to-cell communication processes has even created a new and rapidly developing field of study, glycobiology. Thisbe K. Lindhorst is one of the leading next-generation scientists in the area of carbohydrate research. Within her current book, she presents a comprehensive introduction to the fascinating world of carbohydrates. In a lucid, explicit language, she explains carbohydrate structures and the basic concepts of saccharide chemistry and saccharide biochemistry. With the same clarity, she spans the gap to the glycobiological aspects of modern glyco-science. Sample descriptions of research methods supplement the vital teaching text and open an experienced scientist's bag of tricks required to synthesize and analyze sugar derivatives easily and successfully. This book offers valuable guidance for students as well as for researchers working in chemistry, biochemistry, and biomedicine. Reading it can help everyone become an expert in the field of carbohydrate chemistry. Protecting Groups: Strategies and Applications in Carbohydrate Chemistry Sebastien Vidal, 2019-04-29 A unique overview of the most important protecting group strategies in carbohydrate chemistry. *Protecting Groups: Strategies and Applications in Carbohydrate Chemistry* provides a detailed account of key strategies and methodologies for the protection of carbohydrates. Divided into two parts, the first focuses on groups that are used best to protect a specific position on a carbohydrate. In the second part, specific carbohydrate residues or compounds are discussed in the context of a specific protecting group strategy used to reach the desired regioisomer. This important

book Features chapters on protecting groups at the primary and secondary positions of carbohydrates Describes protecting group strategies towards sialic acid derivatives glycofuranoses sulfated glycosaminoglycans and cyclodextrins Provides information on automated glycan assembly Includes a chapter on the industrial scale synthesis of heparin analogs Written by a team of leaders in the field Protecting Groups Strategies and Applications in Carbohydrate Chemistry is an indispensable guide for academics and industrial researchers interested in carbohydrate and natural product synthesis pharmaceutical chemistry and biochemistry
