

Past Use of Renewable Fuels and Future Requirements of the Renewable Fuel Standard

Billions of gallons

RFS = Renewable Fuel Standard; EISA = Energy Independence and Security Act;
EPA = Environmental Protection Agency.

a. Most of the ethanol used in the United States in the past consisted of corn ethanol, although relatively small amounts of sugarcane ethanol and other types of advanced biofuels, either produced domestically or imported, were also used.

b. The amounts shown here for 2014 are those required under EISA. However, EPA has proposed reducing those amounts.

c. The amounts of biomass-based diesel shown here for 2014 and later years reflect the minimum requirement of 1 billion gallons specified in EISA. EPA will set the actual requirement for each year through future rulemaking.

d. The cap on corn ethanol represents the maximum amount of such ethanol that can be used to meet the total requirement for renewable fuels under EISA.
