Well-Being Daniel Kahneman, Edward Diener, Norbert Schwarz, 1999-07-08 The nature of well being is one of the most enduring and elusive subjects of human inquiry *Well Being* draws upon the latest scientific research to transform our understanding of this ancient question With contributions from leading authorities in psychology social psychology and neuroscience this volume presents the definitive account of current scientific efforts to understand human pleasure and pain contentment and despair The distinguished contributors to this volume combine a rigorous analysis of human sensations emotions and moods with a broad assessment of the many factors from heredity to nationality that bear on our well being Using the tools of experimental science the contributors confront the puzzles of human likes and dislikes Why do we grow accustomed and desensitized to changes in our lives both good and bad Does our happiness reflect the circumstances of our lives or is it determined by our temperament and personality Why do humans acquire tastes for sensations that are initially painful or unpleasant By

examining the roots of our everyday likes and dislikes the book also sheds light on some of the more extreme examples of attraction and aversion such as addiction and depression Among its wide ranging inquiries Well Being examines systematic differences in moods and behaviors between genders explaining why women suffer higher rates of depression and anxiety than men but are also more inclined to express positive emotions The book also makes international comparisons finding that some countries populations report higher levels of happiness than others The contributors deploy an array of methods from the surveys and questionnaires of social science to psychological and physiological experiments to develop a comprehensive new approach to the study of well being They show how the sensory pleasures of the body can tell us something about the higher pleasures of the mind and even how the effectiveness of our immune system can depend upon the health of our social relationships

From Perception to Pleasure Robert Zatorre, 2023-11-17 Why do we love music What enables us to create it perceive it and enjoy it In *From Perception to Pleasure* Robert Zatorre provides answers to these questions from the perspective of cognitive neuroscience explaining how we get from perception of sound patterns to pleasurable responses The book is organized around a central thesis that pleasure in music arises from interactions between cortical loops that enable processing of sound patterns and subcortical circuits responsible for reward and valuation This model integrates knowledge derived from basic neuroscience of the auditory system and of reward mechanisms with the concept that perception and pleasure depend on mechanisms of prediction anticipation and valuation The first part of the book describes the pathways to and from the auditory cortex that generate internal representations of musical structure at different levels of abstraction which then interact with memory sensory motor and other cognitive mechanisms that are essential to perceive and produce music The second part of the book focuses on the functional anatomy of the dopaminergic reward system its involvement in musical pleasure the links between prediction surprise and complexity and what happens when the system is disrupted The book is richly illustrated to help the reader follow the scientific findings Most of all *From Perception to Pleasure* provides an integrative model for a large body of scientific knowledge that explains how patterns of abstract sounds can generate profoundly moving hedonic experiences
