SDL 2005: Model Driven Andreas Prinz, Rick Reed, Jeanne Reed, 2005-06-02 This volume contains the papers presented at the 12th SDL Forum Grimstad Norway The SDL Forum was first held in 1982 and then every two years from 1985 Initially the Forum was concerned only with the Specification and Description Language that was first standardized in the 1976 Orange Book of the International Telecommunication Union ITU Since then many developments took place and the language has undergone several changes However the main underlying paradigm has survived and it is the reason for the success of the Specification and Description Language in many projects This paradigm is based on the following important principles of distributed applications Communication large systems tend to be described using smaller parts that communicate with each other State the systems are described on the basis of an explicit notion of state State change the behavior of the system is described in terms of local changes of the state The original language is not the only representative for this kind of paradigm so the scope of the SDL Forum was extended quite soon after the first few events to also include other ITU standardized languages of the same family such as MSC ASN.1 and TTCN This led to the current scope of System Design Languages

covering all stages of the development process including in particular SDL MSC UML ASN 1 eODL TTCN and URN The focus is clearly on the advantages to users and how to get from these languages the same advantage given by the ITU Specification and Description Language code generation from high level specifications **Theoretical and Applied Aspects of Systems**
