Antea Maton,Prentice-Hall Staff,1997 *Exploring Ecology* Patricia Warren,Janet Galle,2005 Designed specifically for easy use Exploring Ecology combines content with activities all in one place and organized into four clear sections Although the book is targeted to teachers of science in grades 4 8 many activities have been adapted for students ranging from first grade to high school Breeding Contempt Mark Largent,2007-08-30 Most closely associated with the Nazis and World War II atrocities eugenics is sometimes described as a government orchestrated breeding program other times as a pseudo science and often as the first step leading to genocide Less frequently it is recognized as a movement having links to the United States But eugenics does have a history in this country and Mark A Largent tells that story by exploring one of its most disturbing aspects the compulsory sterilization of more than 64 000 Americans The book begins in the mid nineteenth century when American medical doctors began advocating the sterilization of citizens they deemed degenerate By the turn of the twentieth century physicians biologists and social scientists championed the cause and lawmakers in two thirds of the United States enacted laws that required the sterilization of various criminals mental health patients epileptics and syphilitics The movement lasted well into the latter half of the century and Largent shows how even today the sentiments that motivated coerced sterilization persist as certain public figures advocate compulsory birth control such as progesterone shots for male criminals or female welfare recipients based on the same assumptions and motivations that had brought about thousands of coerced sterilizations decades ago *Handbook of Literacy and Technology* David Reinking,Michael C. McKenna,Linda D. Labbo,Ronald D. Kieffer,1998-04-01 The major shift going on today in the technologies of reading and writing raises important questions about conventional conceptions of literacy and its role in education society and culture

What are the important characteristics of electronic forms of reading and writing distinguishing them from printed forms To what extent and in what ways is literacy being transformed by new technologies This central question is addressed in this volume from diverse multidisciplinary perspectives The contributing authors focus on a guiding question in one of the following areas which correspond to the major sections of the book Transforming Texts What are the new differences between printed and electronic texts and what are the implications of new textual forms for defining literacy especially in regard to teaching and learning in schools Transforming Readers and Writers How do electronic reading and writing change conceptualizations of literacy development from childhood through adulthood Transforming Classrooms and Schools What are the effects of introducing new reading and writing technologies into schools and classrooms Transforming Instruction How can instruction be adapted in response to the changing literacy landscape and how can teachers and students exploit forms of reading and writing to enhance teaching and learning Transforming Society What are the broad societal implications of the increasing prevalence of electronic forms of reading and writing Transforming Literacy Research What are the questions that must be addressed as digital reading and writing become more common and what approaches to research will be most useful in addressing those questions This volume is the result of an interactive process The contributors met as a group to discuss drafts of their chapters at a one day meeting convened and sponsored by the National Reading Research Center and had read each others chapters prior to this gathering That meeting was followed by a two day conference attended by approximately 180 researchers educators and policymakers who responded to an open invitation to present papers and to attend sessions focusing on the six major themes of the book Contributors then revised their chapters based on interactions with fellow contributors conference participants and volume editors Thus this work is more than just a compilation of the individual authors views Rather it represents a synthesis of a broad range of current thinking about how literacy is being and may be transformed by technology

Excel 2010 for Biological and Life Sciences Statistics

Thomas J Quirk, Meghan Quirk, Howard Horton, 2012-11-11 This is the first book to show the capabilities of Microsoft Excel to teach biological and life sciences statistics effectively It is a step by step exercise driven guide for students and practitioners who need to master Excel to solve practical science problems If understanding statistics isn't your strongest suit you are not especially mathematically inclined or if you are wary of computers this is the right book for you Excel a widely available computer program for students and managers is also an effective teaching and learning tool for quantitative analyses in science courses Its powerful computational ability and graphical functions make learning statistics much easier than in years past However Excel 2010 for Biological and Life Sciences Statistics A Guide to Solving Practical Problems is the first book to capitalize on these improvements by teaching students and managers how to apply Excel to statistical techniques necessary in their courses and work Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific easy to understand science problems Practice problems are provided at the end of each chapter with their solutions
