Department of the Air Force, 1985 **Data Science** Qurban A Memon, Shakeel Ahmed Khoja, 2019-09-26 The aim of this book is to provide an internationally respected collection of scientific research methods technologies and applications in the area of data science This book can prove useful to the researchers professors research students and practitioners as it reports novel research work on challenging topics in the area surrounding data science In this book some of the chapters are written in tutorial style concerning machine learning algorithms data analysis information design infographics relevant applications etc The book is structured as follows Part I Data Science Theory Concepts and Algorithms This part comprises five chapters on data Science theory concepts techniques and algorithms Part II Data Design and Analysis This part comprises five chapters on data design and analysis Part III Applications and New Trends in Data Science This part comprises four chapters on applications and new trends in data science **Cognitive Search** Peter M. Todd, Thomas Trenholm Hills, Trevor W. Robbins, 2012 This book explores how we search for resources in our minds and in the world The authors examine the evolution and adaptive functions of search the neural underpinnings of goal searching mechanisms across species psychological models of search in memory decision making and visual scenes and applications of search behaviour Metaheuristics-Based Materials Optimization Harbinder Singh, Shailendra Rajput, Abhishek Sharma, 2025-02-27 Metaheuristics Based Materials Optimization Enhancing Materials Applications provides a guide to using metaheuristics based computational techniques to improve the design performance and broaden the applications of various materials The book fuses optimization algorithms with materials engineering enabling more accurate simulations and models for analyzing and predicting the behavior of materials under different conditions allowing for design of materials with improved performance durability energy efficiency cost effectiveness and other desired characteristics Metaheuristic approaches for material synthesis and design structural optimization material characterization property prediction and process optimization are all covered as are comparisons of different algorithms step by step guidelines on how to implement them and case studies of them being applied in real world settings Provides a guide to using metaheuristics based computational techniques to improve the design performance and broaden the applications of various materials Presents real world case studies as well as commonly encountered problems and their solutions Allows for more accurate modeling better material design and development of materials tailored for specific applications *Searching Behaviour* W.J. Bell, 2012-12-06 This is a book about proximate mechanisms Although some theoretical structure is used to introduce the subject the intent is to offer a comprehensive view of the mechanistic side of searching or foraging so as to balance the current emphasis of books on mathematical and functional models It seems to me that the pendulum needs to swing back to studies of how animals behave and that maybe in so doing models will become valuable again in driving experimentation I have probably included too many examples in this book and some are even presented in great detail

Hopefully they provide a complete picture of the kind of animals used the experimental setup the kinds of data yielded and how the data were analysed I have done this in response to frustrating experiences of reading chapters in behavioural ecology books that provide insufficient information with which to evaluate an author's conclusion

Social Foraging Theory

Luc-Alain Giraldeau, Thomas Caraco, 2000-06-04 Although there is extensive literature in the field of behavioral ecology that attempts to explain foraging of individuals social foraging the ways in which animals search and compete for food in groups has been relatively neglected This book redresses that situation by providing both a synthesis of the existing literature and a new theory of social foraging Giraldeau and Caraco develop models informed by game theory that offer a new framework for analysis Social Foraging Theory contains the most comprehensive theoretical approach to its subject coupled with quantitative methods that will underpin future work in the field The new models and approaches that are outlined here will encourage new research directions and applications To date the analysis of social foraging has lacked unifying themes clear recognition of the problems inherent in the study of social foraging and consistent interaction between theory and experiments This book identifies social foraging as an economic interaction between the actions of individuals and those of other foragers This interdependence raises complex questions about the size of foraging groups the diversity of resources used and the propensity of group members to exploit each other or forage cooperatively The models developed in the book will allow researchers to test their own approaches and predictions Many years in development Social Foraging Theory will interest researchers and graduate students in such areas as behavioral ecology population ecology evolutionary biology and wildlife management
