Empirical Labor Economics Theresa J. Devine, Nicolas M.

Kiefer,1991-02-28 Presenting a complete survey of labor economics from the search point of view this is the first book to coordinate a vast and scattered literature making an increasingly important and sophisticated area in modern applied economics readily accessible Completely comprehensive Empirical Labor Economics covers not only sequential and random search but all stochastic models of the labor market and treats underlying economic theory and econometric methods as needed It examines structural search models studies directed at particular policy questions such as the effect of unemployment benefits on unemployment durations and simple descriptive studies considering data from all over the world With valuable summaries and trenchant assessments of the strengths and weaknesses of the search approach Empirical Labor Economics is essential for those embarking on labor market research **Modern Labour Economics** Peter Sloane,Paul Latreille,Nigel O'Leary,2013-03-05 Labour economics as a discipline has changed dramatically in recent years Gone are the days of a job for life These days firms and employees are part of a less regulated more fluid and more international labour market Knowledge training human resource development and human capital are all major factors on the contemporary scene This new textbook is the first properly international textbook to reflect these swingeing changes Its key areas of concentration include the increasing importance of human capital including education and occupational choice the major subdivision of personnel economics including economic inactivity and absenteeism comparative cross country studies and the impact of globalization and migration on national labour markets equal opportunities and issues of discrimination on the basis of race gender and disability conflict at work including both strikes and uniquely individual disputes Other issues explored include the supply and demand of labour wages the current role of trade unions bargaining and conflict and working time The book is written in a clear accessible way with some mathematical exposition reflecting the text s grounding in current microeconomic theory The book also contains case studies designed to illuminate theoretical concepts and exercises and discussion questions to test the students understanding of the various concepts outlined in the text **The Flow Analysis of Labour Markets** Ronald Schettkat,1996-08-08 Well functioning labour markets are a precondition for economic development Here leading researchers present an overview of labour market workings providing new theoretical and empirical insights Unemployment Dynamics in the United States and West Germany Markus Gangl,2012-12-06 In writing this book I increasingly became aware of the extent to which much of the finest social science research has been devoted to the issue of unemployment Unemployment rightly is a key issue in the social sciences for search of social and political answers to the economic social and psychological distress caused by un certainty and macroeconomic change I was glad to find my own worries shared by eminent and respected scholars George Akerlof once confessed to pursue the study of unemployment ultimately because of his father s distress from fear of un employment and Wout Ultee started research on unemployment from the consid eration that parents talk about unemployment risks should not come to dominate marriage parties or other family occasions The problem of unemployment is thus hardly confmed to actual loss of income but one

where economic insecurity begins to undermine the very fabric of society. In consequence to combat unemployment should indeed be a foremost issue in societies striving for freedom and justice for their citizenry yet to succeed obviously requires an understanding of the underlying economic realities. If this study could contribute to this endeavor all the time spent in writing would seem well spent indeed. Against the significant body of existing social science research on unemployment it seems appropriate to be clear about the scope and limitations of the current study however.

**The Applied Economics of Labour** Mark Taylor, 2014-07-16 This book provides an introduction and overview to seven applied financial studies on the theme of labour. The studies cover a wide range of topics from the individual effects of becoming disabled on key aspects of labour market outcomes in Germany to testing whether there is evidence of compression of morbidity using Health and Retirement Study HRS data and analysing the effects of this on the labour supply of older people. The studies employ a variety of applied techniques across a range of countries. This book was originally published as a special issue of Applied Economics.

**Empirical Labor Economics** Theresa J. Devine, Nicholas M. Kiefer, 1991 This volume defines the economics of search which has become a part of the standard graduate curriculum. The concept deals with the costs and benefits to individual workers either employed or unemployed of seeking a job with the highest possible pay.

**Handbook of Regional and Urban Economics** Gilles Duranton, Vernon Henderson, William Strange, 2015-06-29 Developments in methodologies, agglomeration and a range of applied issues have characterized recent advances in regional and urban studies. Volume 5 concentrates on these developments while treating traditional subjects such as housing, the costs and benefits of cities and policy issues beyond regional inequalities. Contributors make a habit of combining theory and empirics in each chapter, guiding research amid a trend in applied economics towards structural and quasi-experimental approaches. Clearly distinguished from the New Economic Geography covered by Volume 4, these articles feature an international approach that positions recent advances within the discipline of economics and society at large. Emphasizes advances in applied econometrics and the blurring of within and between cities. Promotes the integration of theory and empirics in most chapters. Presents new research on housing especially in macro and international finance contexts.
