*Swarm Intelligence for Iris Recognition* Zaheera Zainal Abidin, 2021-11-24 Iris recognition is one of the highest accuracy techniques used in biometric systems The accuracy of the iris recognition system is measured by False Reject Rate FRR which measures the authenticity of a user who is incorrectly rejected by the system due to changes in iris features such as aging and health condition and external factors that affect iris image for instance high noise rate External factors such as technical fault occlusion and source of lighting that causes the image acquisition to produce distorted iris images create error hence are incorrectly rejected by the biometric system FRR can be reduced using wavelets and Gabor filters cascaded classifiers ordinal measures multiple biometric modalities and a selection of unique iris features Nonetheless in the long duration of the matching process existing methods were unable to identify the authenticity of the user since the iris structure itself produces a template changed due to aging In fact the iris consists of unique features such as crypts furrows collarette pigment blotches freckles and pupils that are distinguishable among humans Earlier research was done by selecting unique iris features However these had low accuracy levels A new way of identifying and matching the iris template using the nature inspired algorithm is described in this book It provides an overview of iris recognition that is based on nature inspired environment technology The book is useful for students from universities polytechnics community colleges practitioners and industry practitioners

**Artificial Intelligence, Evolutionary Computing and Metaheuristics** Xin-She Yang, 2012-07-27

Alan Turing pioneered many research areas such as artificial intelligence, computability, heuristics and pattern formation. Nowadays at the information age it is hard to imagine how the world would be without computers and the Internet. Without Turing's work, especially the core concept of Turing Machine at the heart of every computer, mobile phone and microchip today, so many things on which we are so dependent would be impossible. 2012 is the Alan Turing year, a centenary celebration of the life and work of Alan Turing. To celebrate Turing's legacy and follow the footsteps of this brilliant mind, we take this golden opportunity to review the latest developments in areas of artificial intelligence, evolutionary computation and metaheuristics, and all these areas can be traced back to Turing's pioneer work. Topics include Turing test, Turing machine, artificial intelligence, cryptography, software testing, image processing, neural networks, nature inspired algorithms such as bat algorithm and cuckoo search, and multiobjective optimization and many applications. These reviews and chapters not only provide a timely snapshot of the state of art developments but also provide inspiration for young researchers to carry out potentially ground breaking research in the active diverse research areas in artificial intelligence.
