Low and Lower Fertility Ronald R. Rindfuss, Minja Kim Choe, 2015-10-12 This volume examines two distinct low fertility scenarios that have emerged in economically advanced countries since the turn of the 20th century one in which fertility is at or near replacement level and the other where fertility is well below replacement It explores the way various institutions histories and cultures influence fertility in a diverse range of countries in Asia Europe North America and Australia The book features invited papers from the Conference on Low Fertility Population Aging and Population Policy held December 2013 and co sponsored by the East West Center and the Korea Institute for Health and Social Affairs KIHASA It first presents an overview of the demographic and policy implications of the two low fertility scenarios Next the book explores five countries currently experiencing low fertility rates China Hong Kong Japan Singapore and South Korea It then examines three countries that have close to replacement level fertility Australia the Netherlands and the United States Each country is featured in a separate chapter written by a demographer with expert knowledge in the area Very low fertility is linked to a number of conditions countries face including a declining population size At the same time low fertility and its effect on the age structure threatens social welfare policies This book goes beyond the technical to examine the core institutional policy and cultural factors behind this increasingly important issue It helps readers to make cross country comparisons and gain insight into how diverse institutions policies and culture shape fertility levels and patterns *Family and Population*

Changes in Singapore Wei-Jun Jean Yeung, Shu Hu, 2018-04-17 This book depicts the evolution of Singapore's family and population landscape in the last half a century the related public policies and future challenges Since the country gained independence in 1965 family and population policies have been integral to her nation building strategies The chapters discuss the changes in population compositions family structures relations and values among major ethnic groups They also discuss policies for vulnerable populations such as female headed households cross cultural families same sex partnering the elderly and low income families *An Introduction to Statistical Modeling of Extreme Values* Stuart Coles, 2013-11-27

Directly oriented towards real practical application this book develops both the basic theoretical framework of extreme value models and the statistical inferential techniques for using these models in practice Intended for statisticians and non statisticians alike the theoretical treatment is elementary with heuristics often replacing detailed mathematical proof Most aspects of extreme modeling techniques are covered including historical techniques still widely used and contemporary techniques based on point process models A wide range of worked examples using genuine datasets illustrate the various modeling procedures and a concluding chapter provides a brief introduction to a number of more advanced topics including Bayesian inference and spatial extremes All the computations are carried out using S PLUS and the corresponding datasets and functions are available via the Internet for readers to recreate examples for themselves An essential reference for students and researchers in statistics and disciplines such as engineering finance and environmental science this book will

also appeal to practitioners looking for practical help in solving real problems Stuart Coles is Reader in Statistics at the University of Bristol UK having previously lectured at the universities of Nottingham and Lancaster In 1992 he was the first recipient of the Royal Statistical Society's research prize He has published widely in the statistical literature principally in the area of extreme value modeling **Laws of the State of New York** New York (State),1957 *Demography: Analysis and Synthesis, Four Volume Set* Graziella Caselli,Jacques Vallin,Guillaume Wunsch,2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks *Demography Analysis and Synthesis* offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of *Demography Analysis and Synthesis* have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations

An Asian Direct and Indirect Real Estate

Investment Analysis Kim Hin David HO, 2021-05-04 This book is dedicated to real estate scholastic work in advancing the greater understanding of real estate investment analysis This is because there has been limited research in bringing out clearly the uncertainty or risk which is quantifiable uncertainty in real estate market analysis Even real estate market research which is carried out as an industry practice among private real estate researches is no exception Another reason is that it has been widely accepted that while the financial revolution has substantially changed many sectors of the financial industry it has made little impact on real estate development and investment practice as well as scholastic work Furthermore while it is readily acknowledged that despite its huge share in the world's real estate investment discipline and research

is on the whole still a poorly researched subject area. As a result the industry tends to be dominated by traditional real estate analysts with little understanding of real estate market uncertainty and capital markets. These commentators are widely regarded to spend too much time worrying about local space supply and demand conditions while totally losing sight of the everchanging real estate market and capital market conditions. The theme of this book is real estate investment analysis of direct and indirect real which in turn can be appropriately managed under economic theory and the theoretical conceptions of real estate finance provided the uncertainty is quantifiable. The book deploys case studies involving Singapore and Asia. This Black over White background viii framework enables real estate market analysis to attempt what defines the Asian direct and indirect real estate sectors: what is being measured, how it behaves in terms of price and non price factors, how it is structured, and how it effectively achieves the objectives of sustainable total returns and manageable real estate market uncertainty. Managing real estate market uncertainty optimally is achieved at the portfolio level through real estate asset allocation. This is important because the real estate portfolio is able to virtually eliminate the unique i.e. specific uncertainties among the various Asian real estate sectors, thus retaining within the portfolio only the systemic i.e. market wide uncertainty. Apart from real estate asset allocation, the alternative and modern approach to risk management at the portfolio level is the value at risk (VaR) approach. Another modern and important alternative to coping with uncertainty is real option analysis and pricing that help to better define real estate market uncertainty in extent and time. Real option analysis and pricing also represent uncertainty via a decision tree and the risk neutral probability conception in order to comprehend how uncertainty impacts on the value of real estate investment decisions. The pricing of uncertainty is based on the risk free hedge security conception. These are best examined at the micro level of the investment in a real estate development opportunity on vacant land. Nevertheless, the real estate sectors in Singapore and Asia offer promising prospects since the Asian currency crisis of 1997. It is now timely to take stock and make an assessment of how the sectors would pan out for the future. Ill into at least rest the next century. I am very pleased to present our thinking and research in international real estate with particular emphasis on Asia. The region's vast potential for real estate is itself a large incentive for international real estate research and education that has inspired me to document the significant work I have done over the years. Black over White background ix I wish all readers a pleasurable reading of this book and I thank you sincerely for your support without which the publication of this book would be made all the more difficult. Dr HO Kim Hin, David Honorary Professor, University of Hertfordshire, UK, International Real Estate Public Policy, March 2021.

"Economic Growth and Income Inequality in China, India and Singapore " Pundarik Mukhopadhaya, 2017-07-05. The world at large is watching both China and India as powerhouses of economic growth. The two nations have achieved significantly high rates of economic growth ever since their respective economies liberalized in 1978 and 1991. Singapore, despite its limited land size and almost total dependence on external trade, has performed remarkably well and has moved from the third world to the first. This book documents and

explains the rapid economic growth of the three key Asian economies The book also looks at what has happened to income inequality in the context of superior growth performance It makes comparative assessments and examines the implications for the three nations Since free markets have nothing in them to produce a reduction in income inequality among persons households one must at best hope for equality of opportunity notably reflected in identical schooling for all identical health care for all and minimal rather than vulgar inequality in housing This book is particularly useful for both China and India which may wish to study and learn from Singapore in regard to the policies programmes and projects aimed at ensuring equality of opportunity The book is backed by considerable expertise on the part of the researchers with demonstrated expertise through their publications spawning a few decades It is invaluable to those who are concerned with designing policies for developing countries aimed at rapid and inclusive economic growth This book has been made possible by the intellectual and financial support extended by the Global Asia Institute National University of Singapore

Mathematics Curriculum in Pacific Rim Countries - China, Japan, Korea, and Singapore Zalman Usiskin, Edwin Willmore, 2008-09-01 This volume contains the proceedings of the First International Curriculum Conference sponsored by the Center for the Study of Mathematics Curriculum CSMC The CSMC is one of the National Science Foundation Centers for Learning and Teaching Award No ESI 0333879 The countries China Japan Korea and Singapore in alphabetical order which also happens to be the order of their populations have each been in the news because of their performance on international tests and or their economic performance and potential They also have centralized education ministries that create a single mathematics curriculum framework followed in the entire country In all

these countries curricula are differentiated for students with different interests usually around Grade 10 or 11 We think the reader will agree that the papers are of very high quality befitting the standing of the individuals who were invited but particularly notable for our international speakers because in three of these countries English is not the speaker's first language Following each paper we have included a short biography of the author's so that the reader can understand the perspective of the paper's author

Managing Human Resources in Asia-Pacific Arup Varma, Pawan S.

Budhwar, 2013-06-26 Given the enormous economic and developmental changes being experienced by nations in the Asia Pacific region and the related movement of people between and across countries it is critical that we better understand the HRM policies and practices of these nations The latest instalment in the Global HRM series *Managing Human Resources in Asia Pacific 2E* presents the HRM situations in a number of South East Asian and Pacific Rim countries highlighting the growth of the personnel and HR function the dominant HRM systems in the area the influence of different factors on HRM and the challenges faced by HR functions in these nations This edition extends its coverage to Cambodia Fiji Indonesia and the Philippines a new chapter discusses HR research challenges in the region such as the transferability of western constructs problems with data collection and the emergence of MNEs from Asia Pacific

Inequality in Asia and the Pacific Ravi Kanbur, Changyong Rhee, Juzhong Zhuang, 2014-02-24 Asia's rapid economic growth has led to a significant reduction in extreme poverty but accompanied by rising inequality This book deals with three questions What have been the trends of inequality in Asia and the Pacific What are the key drivers of rising inequality in the region How should Asian countries respond to the rising inequality Technological change globalization and market oriented reform have been the key drivers of Asia's remarkable growth and poverty reduction but they have also had significant distribution consequences These three drivers of growth cannot be hindered because they are the sources of productivity improvement and betterment of quality of life This book will be useful to those interested in policy options that could be deployed by Asian countries in confronting rising inequality

Prior Processes and Their Applications Eswar G. Phadia, 2016-07-27 This book presents a systematic and comprehensive treatment of various prior processes that have been developed over the past four decades for dealing with Bayesian approach to solving selected nonparametric inference problems This revised edition has been substantially expanded to reflect the current interest in this

area After an overview of different prior processes it examines the now pre eminent Dirichlet process and its variants including hierarchical processes then addresses new processes such as dependent Dirichlet local Dirichlet time varying and spatial processes all of which exploit the countable mixture representation of the Dirichlet process It subsequently discusses various neutral to right type processes including gamma and extended gamma beta and beta Stacy processes and then describes the Chinese Restaurant Indian Buffet and infinite gamma Poisson processes which prove to be very useful in areas such as machine learning information retrieval and featural modeling Tailfree and Polya tree and their extensions form a separate chapter while the last two chapters present the Bayesian solutions to certain estimation problems pertaining to the distribution function and its functional based on complete data as well as right censored data Because of the conjugacy property of some of these processes most solutions are presented in closed form However the current interest in modeling and treating large scale and complex data also poses a problem the posterior distribution which is essential to Bayesian analysis is invariably not in a closed form making it necessary to resort to simulation Accordingly the book also introduces several computational procedures such as the Gibbs sampler Blocked Gibbs sampler and slice sampling highlighting essential steps of algorithms while discussing specific models In addition it features crucial steps of proofs and derivations explains the relationships between different processes and provides further clarifications to promote a deeper understanding Lastly it includes a comprehensive list of references equipping readers to explore further on their own

Distribution Theory of Runs and Patterns and Its Applications James C. Fu,W. Y. Wendy Lou,2003-01-01 This book provides a rigorous comprehensive introduction to the finite Markov chain imbedding technique for studying the distributions of runs and patterns from a unified and intuitive viewpoint away from the lines of traditional combinatorics The central theme of this approach is to properly imbed the random variables of interest into the framework of a finite Markov

chain and the resulting representations of the underlying distributions are compact and very amenable to further study of associated properties The concept of finite Markov chain imbedding is systematically developed and its utility is illustrated through practical applications to a variety of fields including the reliability of engineering systems hypothesis testing quality control and continuity measurement in the health care sector Contents Finite Markov Chain Imbedding Runs and Patterns in a Sequence of Two State Trials Runs and Patterns in Multi State Trials Waiting Time Distributions Random Permutations Applications Readership Graduate students and researchers in probability and statistics *Information Technology and Singapore Society* Eddie C.
