Motives And Mechanisms An Introduction To The Psychology Of Action:

Motives and Mechanisms Rom Harré, David Clarke, Nicola De Carlo, 2015-09-16 As the first introductory statement of the new psychology *Motives and Mechanisms* originally published in 1985 aims to bring the study of human action to the forefront of the subject Like any science the practice of psychology is very much influenced by the hidden assumptions of its practitioners The argument put forward in this important text shows how these assumptions can be brought out by comparing psychology with the natural sciences and with common sense understanding In pursuing the integration of traditional research methods with a new style of investigation the basic principle is that social structures and mental structures are in reciprocal relation with one another because each is involved in the creation of the other By adopting this principle social structures become the basis for research into the cognitive and emotional organization of mind The authors devote two key chapters to the central question that underlies this stance are human actions and human actors products of internal processes such as those described by Freud or of external social forces of the kind described by Mead *The Myth of Social Action* Colin Campbell, 1998-07-09 *The Myth of Social Action* first published in 1996 is a powerful critique of the sociology of the time and a call to reject the prevailing orthodoxy Arguing that sociological theory had lost its way Colin Campbell mounts a case for a new dynamic interpretivism a perspective on human conduct which is more inkeeping with the spirit of traditional Weberian action theory Discussing and dismissing one by one the main arguments of those who reject individualistic action theory he demonstrates that this has been wrongly rejected in favour of the interactional social situationalist approach now dominating sociological thought **Theoretical Principles of Distance Education** Desmond Keegan, 2005-08-15 According to UNESCO statistics 10 million of the world's 600 million students study at a distance *Theoretical Principles of Distance Education* seeks to lay solid foundations for the education of these students and for the structures within which they study As a more industrialised form of education provision distance education is well adapted to the use of new communication technologies and brings to education many of the strengths and dangers of post industrialism The central focus of the study of distance education is the placing of the student at home or at work and the justification of the abandonment in this form of education of interpersonal face to face communication previously considered to be a cultural imperative for education in both east and west This book explores the problems that distance education poses to the theorist bringing together an international team of distance educators to address these issues for the first time in a systematic way The team comprises theoreticians administrators experts in educational technology and adult education experts in learning from video machines from computers and other forms of technology Contributions from Italy and Scandinavia contrast with viewpoints provided by scholars from the US Canada Australia and the UK **Brain Processes, Theories, and Models** Roberto Moreno-Díaz, José Mira, 1996 W S McCulloch a professor of psychiatry at Illinois later a scientist at the Research Laboratory of Electronics at MIT and author of the groundbreaking book *Embodiments of Mind* reissued in paperback in

1988 was one of the founding fathers of Cybernetics Along with Norbert Wiener John von Neumann and H von Foerster he sought to integrate the disciplines of neurophysiology mathematics and engineering in a rigorous investigation into what brains do and how they do it A magnetic personality McCulloch set thoughts into motion for instance neural nets as parallel computers that have sparked research and controversy for decades **Focus on Fitness** Nicholas J. Karolides, Melissa Karolides, 1993 A solid resource directed toward teenagers and their concerned adults but containing material of interest to anyone beginning an exercise program Covers physical fitness and body types emotional fitness and stress measuring health related fitness energy systems and exercise benefits aerobic activities exercise injuries nutrition eating disorders and overtraining and motivation Each chapter includes fiction nonfiction and nonprint resources Annotation copyright by Book News Inc Portland OR *Paul F. Lazarsfeld, An Empirical Theory of Action* Christian Fleck, Nico Stehr, 2025-11-18 This book provides a critical introduction to the key writings of Paul Lazarsfeld 1901 1976 edited by two prominent sociologists It includes Lazarsfeld s early work on youth and occupation which shows the intellectual influences of Austro Marxism academic psychology and the philosophy of the Vienna Circle and how they were applied to specific social issues They also show how Lazarsfeld s concerns about the intellectual and methodological aspects of sociology which foreshadowed some of the major issues in current sociological methods played an important role in shaping the direction of the discipline in the United States The essays demonstrate how Lazarsfeld laid many of the foundations for reliable social survey techniques and qualitative methods for understanding key aspects of contemporary society Some examples of these aspects are voting studies opinion polling occupational research and mass media research Lazarsfeld s early work in administrative research laid the groundwork for a lot of market and business research The essays in this book are accompanied by a detailed and illuminating biographical introduction by the editors This collection is an important addition to the history of 20th century sociology It is also the only English language source of Paul Lazarsfeld s early writings Motivation - Mechanisms of the Mind and their Quest for Expression Menno A. Mennes, 2025-10-01 This volume presents a first introduction to a thought provoking Model of Motivation developed by Menno Mennes over a period of almost thirty years The Model of Motivation in its approach presents a radical departure from everything that has appeared so far in literature on the subject And yet it provides a surprisingly detailed account of how motivation works which appears to be supported by findings from theories and research from current literature In an unparalleled analysis the Model seamlessly integrates these major theories into a consistent comprehensive approach to motivation explaining not only the essentials of each theory but also providing explanations for controversies that have hitherto remained largely unresolved Motivation appears to be an inner dialogue a stepwise partly cyclical Process in which we deal with our surroundings that often interfere in our ambitions our wishes and desires Deep personal insights into those Mechanisms of the Mind reveal implications that may lead to a fundamental new understanding of the origins of many disturbing issues we witness in present day society including neglect and denial
