The Power of Human Imagination Jerome L. Singer, Kenneth S. Pope, 2012-12-06 For at least half of the twentieth century psychology and the other mental health professions all but ignored the significant adaptive possibilities of the human gift of imagery Our capacity seemingly to duplicate sights sounds and other sensory experiences through some form of central brain process continues to remain a mysterious almost miraculous skill Because imagery is so much a private experience experimental psychologists found it hard to measure and turned their attention to observable behaviors that could easily be studied in animals as well as in humans Psychoanalysts and others working with the emotionally disturbed continued to take imagery information seriously in the form of dream reports transference fantasies and as indications of hallucinations or delusions On the whole however they emphasized the maladaptive aspects of the phenomena the distortions and defensiveness or the regressive qualities of daydreams and sequences of images The present volume grows out of a long series of investigations by the senior author that have suggested that daydreaming and the stream of consciousness are not simply manifestations in adult life of persisting phenomena of childhood Rather the data suggest that imagery sequences represent a major system of encoding and transforming information a basic human capacity that is inevitably part of the brain's storage process and one that has enormous potential for adaptive utility A companion volume *The Stream of Consciousness* edited by Kenneth S Pope and Jerome L
