Computer Vision Systems Henrik I. Christensen, 1998-12-18 Computer Vision has now reached a level of maturity that allows us not only to perform research on individual methods but also to build fully integrated computer vision systems of a significant complexity This opens up a number of new problems related to architectures systems integration validation of stems using benchmarking techniques and so on So far the majority of vision conferences have focused on component technologies which has motivated the organization of the First International Conference on Computer Vision Systems ICVS It is our hope that the conference will allow us not only to see a number of interesting new vision techniques and systems but hopefully also to define the research issues that need to be addressed to pave the way for more wide scale use of computer vision in a diverse set of real world applications ICVS is organized as a single track conference consisting of high quality previously unpublished contributed papers on new and original research on computer vision systems All contributions will be presented orally A total of 65 papers were submitted for consideration by the conference All papers were viewed by three reviewers from the program committee Thirty two of the papers were selected for presentation ICVS 99 is being held at the Alfredo Kraus Auditorium and Convention Centre in Las Palmas on the lovely Canary Islands Spain The setting is sprightly which seems only appropriate as the basis for a new conference

Branislav Kisacanin, Shuvra S. Bhattacharyya, Sek Chai, 2008-09-26 As a graduate student at Ohio State in the mid 1970s I inherited a unique computer vision laboratory from the doctoral research of previous students They had designed and built an early frame grabber to deliver digitized color video from a very large electronic video camera on a tripod to a mini computer with a huge disk drive about the size of four washing machines They had also signed a binary image array processor and programming language complete with a user's guide to facilitate designing software for this one of a kind processor The overall system enabled programmable real time image processing at video rate for many operations I had the whole lab to myself I designed software that detected an object in the field of view tracked its movements in real time and displayed a running description of the events in English For example An object has appeared in the upper right corner It is moving down and to the left Now the object is getting closer The object moved out of sight to the left about like that The algorithms were simple relying on a sufficient image intensity difference to separate the object from the background a plain wall From computer vision papers I had read I knew that vision in general imaging conditions is much more sophisticated But it worked it was great fun and I was hooked

Computer Vision and Action Recognition Md. Atiqur Rahman Ahad, 2011-12-02 Human action analyses and recognition are challenging problems due to large variations in human motion and appearance camera viewpoint and environment settings The field of action and activity representation and recognition is relatively old yet not well understood by the students and research community Some important but common motion recognition problems are even now unsolved properly by the computer vision community However in the last decade a number of good approaches are proposed and evaluated subsequently by many researchers Among those methods some methods get significant attention from many researchers in the computer vision field due to their better robustness and performance This book will cover gap of information and materials on comprehensive outlook through various strategies from the scratch to the state of the art on computer vision regarding action recognition approaches This book will target the students and researchers who have knowledge on image processing at a basic level and would like to explore more on this area and do research The step by step methodologies will encourage one to move forward for a comprehensive knowledge on computer vision for recognizing various human actions
