High-Level System Modeling Ronald Waxman,Jean-Michel Bergé,Oz Levia,Jacques Rouillard,2012-12-06 In system design generation of high level abstract models that can be closely associated with evolving lower level models provides designers with the ability to incrementally test an evolving design against a model of a specification Such high level models may deal with areas such as performance reliability availability maintainability and system safety Abstract models also allow exploration of the hardware versus software design space in an incremental fashion as a fuller detailed design unfolds leaving behind the old practice of hardware software binding too early in the design process Such models may also allow the inclusion of non functional aspects of design e g space power heat in a simulatable information model dealing with the system s operation This book addresses Model Generation and Application specifically in the following domains Specification modeling linking object data modeling behavior modeling and activity modeling

Operational specification modeling modeling the way the system is supposed to operate from a user's viewpoint Linking non functional parameters with specification models Hybrid modeling linking performance and functional elements Application of high level modeling to hardware software approaches Mathematical analysis techniques related to the modeling approaches Reliability modeling Applications of High Level Modeling Reducing High Level Modeling to Practice High Level System Modeling Specification and Design Methodologies describes the latest research and practice in the modeling of electronic systems and as such is an important update for all researchers design engineers and technical managers working in design automation and circuit design Building Tightly Integrated Software Development Environments: The IPSEN Approach

Process for System Architecture and Requirements Engineering Derek Hatley, Peter Hruschka, Imtiaz Pirbhai, 2013-08-02 This is the digital version of the printed book Copyright 2000 Derek Hatley and Imtiaz Pirbhai authors of Strategies for Real Time System Specification join with influential consultant Peter Hruschka to present a much anticipated update to their widely implemented Hatley Pirbhai methods Process for System Architecture and Requirements Engineering introduces a new approach that is particularly useful for multidisciplinary system development It applies equally well to all technologies and thereby provides a common language for developers in widely differing disciplines The Hatley Pirbhai Hruschka approach H H P has another important feature the coexistence of the requirements and architecture methods and of the corresponding models they produce These two models are kept separate but the approach fully records their ongoing and changing interrelationships This feature is missing from virtually all other system and software development methods and from CASE tools that only automate the requirements model System managers system architects system engineers and managers and engineers in all of the diverse engineering technologies will benefit from this comprehensive pragmatic text In addition to its models of requirements and architecture and of the development process itself the book uses in depth case studies of a hospital monitoring system and of a multidisciplinary groundwater analysis system to illustrate the principles Compatibility Between the H H P Methods and the UML The Hatley Pirbhai architecture and requirements methods described in Strategies for Real Time System Specification have been widely used for almost two decades in system and software development Now known as the Hatley Hruschka Pirbhai H H P methods they have always been compatible with object oriented software techniques such as the UML by defining architectural elements as classes objects messages inheritance relationships and so on In Process for System Architecture and Requirements Engineering that compatibility is made more specific through the addition of message diagrams inheritance diagrams and new notations that go with them In addition state charts while never excluded are now specifically included as a representation of sequential machines These additions make definition of the system software boundary even more straightforward while retaining the clear separation of requirements and design at the system levels that is a hallmark of the H H P methods not shared by most OO techniques Once the transition to software is made the developer is free to continue using the H H P methods or to use the UML or any other software specific technique
