Recent Revolution In Mathematics:

Revolutions and Continuity in Greek Mathematics Michalis Sialaros, 2018-04-23 This volume brings together a number of leading scholars working in the field of ancient Greek mathematics to present their latest research In their respective area of specialization all contributors offer stimulating approaches to questions of historical and historiographical revolutions and continuity Taken together they provide a powerful lens for evaluating the applicability of Thomas Kuhn s ideas on scientific revolutions to the discipline of ancient Greek mathematics Besides the latest historiographical studies on geometrical algebra and premodern algebra the reader will find here some papers which offer new insights into the controversial relationship between Greek and pre Hellenic mathematical practices Some other contributions place emphasis on the other edge of the historical spectrum by exploring historical lines of continuity between ancient Greek Byzantine and post Hellenic mathematics The terminology employed by Greek mathematicians along with various non textual and material elements is another topic which some of the essays in the volume explore Finally the last three articles focus on a traditionally rich source on ancient Greek mathematics namely the works of Plato and Aristotle *Revolution in Science* I. Bernard Cohen, 1985 Cohen s exploration seeks to uncover nothing less than the nature of all scientific revolutions the stages by which they occur their time scale specific criteria for determining whether or not there has been a revolution and the creative factors in producing a revolutionary new idea **A History of the "new Mathematics" Movement and Its Relationship with Current Mathematical Reform** Angela Lynn Evans Walmsley, 2003 A History of the New Mathematics Movement and its Relationship with Current Mathematical Reform provides a history of the new mathematics movement of the 1950s 1960s and early 1970s in the United States and relates it to current mathematics curricular reform The history of the new math education movement is explained in terms of the general curriculum in schools the mathematics curriculum the teaching standards and the pedagogical techniques used A complete analysis of the history of the new math movement was accomplished by separately investigating major and minor new math projects In conjunction the aftermath of the new math movement is explained providing suggestions as to why this movement is often seen as having failed A short history of reform from the 1970s to the present is provided Finally the book compares the new mathematics movement with the current mathematics reform movement led by the National Council of Teachers of Mathematics [The New Revolution in Psychology and the Neurosciences](#) Mario Manto, Cherie Marvel, Larry Vandervert, 2022-06-23 Historically researchers of neuroscience and psychology have believed that the cerebral cortex produces the unique mental capacities of human beings However a prevalence of brain imaging evidence now shows that the cerebral cortex while the seat of our everyday experience notably in working memory is not predominant in actually formulating our amazing capabilities Rather the achievements that mark humans as Homo sapiens originate in the cerebellum which increased three to fourfold in size and acquired massive cognitive and social optimization capabilities over the last million years Thus through its optimization of

experience and skill of the cerebral cortex it was the cerebellum that was and is predominant in producing culture language mathematics creativity and extreme levels of skill in all areas from sports to computer science and art These optimizing functions of the cerebellum are shown in the cases of Albert Einstein Wolfgang Amadeus Mozart Maryam Mirzakhani and the predictive powers of Stonehenge This book fills a critical role in bringing courses up to date with the profound basic changes this newly understood predominant role of the cerebellum provides for understanding the mechanisms related to all topics in psychology and neuroscience It is critical that this new revolution in psychology and the neurosciences be introduced and reviewed in courses that are part of both undergraduate and graduate studies in psychology and neuroscience This text might also be of use to courses in anthropology and cross disciplinary studies as the cerebellum was critically involved in the evolution of cognitive and social behaviour

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
