Pharmacology of the Eye M.L. Sears, 2012-12-06 Roots of the theory and practice of ocular pharmacology may be traced to the ancient Mesopotamian code of Hammurabi and then to several papyri reflecting the clinical interests of the Egyptians The evolution of its art and science was irregularly paced until the nineteenth century when Kohler in 1884 proved the anesthetic effect of cocaine on the cornea and when Fraser Laquer Schmiedeberg Meyer and others studied the pharmacology of the autonomic nervous system by way of observations of the pupil Advances in the past few decades have been nothing short of explosive How can the student physician or basic research scientist stay in touch with these electrifying studies To help with the answer to this question the authors set as their goal the development of increased understanding so that the student research scientist and ophthalmologist can cope with the latest discoveries The authors want to narrow what appears to be an ever increasing gap between basic science and ophthalmology The basic aspects of pharmacology have been presented in light of the natural physiology In this regard while distinctions among endogenous mechanisms drug effects and the pathogenesis of disease are to be separately recognized appreciation must be given to the concept that both the desirable and unwanted manifestations or functions caused by either disease or drugs must very often represent a quantitative change in normal metabolic pathways

Development of Anti-Asthma Drugs Derek R. Buckle, Harry Smith, 2013-10-22 Development of Anti Asthma Drugs reviews existing asthma treatments and novel approaches currently under investigation in the context of their mode of action and clinical effectiveness in the hope that this might lead to a greater understanding of the factors involved in the expression of the disease and therefore in the design of better drugs It is planned based on the concept of the

causes and treatment of asthma This book is organized in three main parts Part I deals with the nature of asthma its pathological mechanisms natural history and epidemiology Part II discusses mediators associated with asthma including platelet activating factor leukotrienes and histamine Part II covers pharmaceutical approaches in the development of anti asthma drugs and includes sections on inhibitors of mediator release and competitive and functional antagonists This book will be of interest to persons dealing with studies on anti asthma drugs and those interested in pharmacological development
