Research Methodology in Education and Training Carole Daverne-Bailly, Richard Wittorski, 2022-08-23 This book is a methodological guide intended for those who wish to better understand how to conduct research in the education and training sciences. It is organized into three main parts. The first part deals with postures emphasizing the idea that engaging in a research process involves taking a different stance from that of a social or professional actor. For example, this may require converting a professional or social question into a research question or reflecting on the use of a social vocabulary in research. The second part concerns practices that is how research is conducted: the definition of a research question based on findings, theoretical exploration and problematization, the production of empirical information and its analysis and restitution. The third and final part concludes by focusing on the diversity of research forms: not only research cultures specific to disciplinary fields and approaches such as action research, collaborative research or research training, but also the design choices in terms of multi-inter or trans-disciplinarity. *Handbook of Research on Operational Quality Assurance in Higher Education for Life-Long Learning* Nuninger, Walter, Châtelet, Jean-Marie, 2019-12-06 Previously, key levers of higher education have seemed to be the learning organization, work integrated learning, for life-long learning and learner-centered pedagogy. However, funding evolution and the integration of digital tools are changing professional styles and learning behaviors. Nonetheless, the sustainability of higher education requires quality agreements based on ethical, robust and replicable pedagogical approaches. The *Handbook of Research on Operational Quality Assurance in Higher Education for Life-Long Learning* is a comprehensive scholarly book that focuses on the evolution of the education framework and job market as well as necessary changes needed in organizations to reply to life-long learning and competency-based training initiatives. Highlighting topics such as digital environment, e-learning and learning analytics, this book is essential for higher education faculty, managers, deans, professionals, administrators, educators, academicians, researchers and policymakers.

Recherches, pratiques et savoirs en éducation Jean Donnay, Marc Bru, 2002 Par ses origines, ses visées, ses modes de construction et de validation, chacun des savoirs relatifs à l'éducation possède un intérêt particulier. Dans leur spécificité et leur

diversité des savoirs laborés par les praticiens de l'éducation et de la formation sont aujourd'hui reconnus et valorisés comme peuvent l'être également dans leur diversité et selon des critères qui leur sont propres les savoirs produits par les chercheurs professionnels. La question qui se pose n'est donc plus celle de la reconnaissance d'un pluralisme des savoirs mais celle de leurs rapports et de leur mise en relation. Qu'il s'agisse d'interroger les savoirs de la recherche en éducation d'en préciser la spécificité d'identifier les savoirs des professionnels de l'éducation et d'en expliciter la genèse de repérer le jeu interactif des savoirs en formation et au cours de la professionnalisation chaque auteur du présent ouvrage s'applique à lucider les caractéristiques distinctives des différents savoirs. Elucidation indispensable en vue de leur mise en relation et de leur possible articulation à partir d'un dialogue critique inventer ou réinventer car les rapports entre savoirs relatifs à l'éducation ne se décryptent pas au nom d'un choix pistologique qui en fixerait une fois pour toutes le cadre et la forme. Cet ouvrage intéressera tout particulièrement les professeurs étudiants et chercheurs en sciences de l'éducation les pédagogues les formateurs les formateurs de formateurs les décideurs en éducation et formation.

Nouvelles dynamiques de recherche en éducation Martha Anadon, 2017-02-01T00:00:00-05:00 Le renouvellement des pratiques de recherche en éducation est un phénomène marquant des dernières décennies elles-mêmes caractérisées par la problématique de la professionnalisation de l'enseignement. C'est au cœur de cette professionnalisation que la recherche en éducation s'est donnée des nouvelles finalités des nouvelles préoccupations ainsi que de nouveaux axes de développement centrés sur la pratique éducative. Les textes réunis dans cet ouvrage clament chacun leur manière une partie de ce phénomène en explicitant quatre formes de recherche la recherche action la recherche collaborative la recherche développement et la recherche évaluative. Axes sur la personne et sur son développement professionnel ces nouvelles dynamiques de recherche sont susceptibles de contribuer à l'étude des pratiques la production des connaissances qui permettent de saisir la complexité de la réalité éducative et la transformation des pratiques professionnelles. Ces contributions intéresseront les étudiants mais aussi les praticiens et les futurs enseignants qui ont pour responsabilité de développer au cours de leur formation un esprit réflexif capable d'autoévaluation et de perfectionnement professionnel. Elles s'adressent aussi aux chercheurs et aux professionnels afin qu'ils prolongent ces interrogations sur les nouvelles dynamiques que propose la recherche en éducation.

Recherche comparative en éducation Mark Bray, Bob

Adamson, Mark Mason, 2010-03-31 Les approches et méthodes en recherche en éducation comparée ne reçoivent pas toujours l'attention qu'elles méritent. Ce livre ouvre de nouvelles perspectives par rapport aux traditions bien ancrées dans ce domaine. Un aspect particulier de l'ouvrage est qu'il traite d'unités d'analyse spécifiques. Les chapitres distincts se consacrent à la comparaison de lieux, systèmes éducatifs, époques, cultures, valeurs, politiques, programmes scolaires, etc. Ces chapitres sont considérés dans leur contexte. L'intérieur de cadres d'analyse plus vastes qui permettent d'identifier les objectifs et les points forts du domaine. Ce livre envisage également les comparaisons d'un point de vue inter et intra national et souligne l'importance d'aborder les thèmes sous des angles différents. Il sera une référence non seulement pour les chercheurs en éducation comparée mais également pour les décideurs qui désirent mieux comprendre les paramètres et l'utilité de ce domaine.

Learning Robotics, with Robotics, by Robotics Ilaria Gaudiello, Elisabetta Zibetti, 2016-09-16 The relationship between technological and pedagogical innovation has recently created a new field of research at the crossroads between Psychology, Educational Sciences and Artificial Intelligence. Educational Robotics (ER). Through analysis of the achievable educational goals based on the technological status and specific learning modes of different types of robots, it is possible to define three pedagogical paradigms: learning robotics, learning with robotics and learning by robotics. In this book, we address these three paradigms through three themes: human representations of robots, the acceptance and trust shown when interacting with a humanoid and learning favored by the development and programming of robots in an educational context. These themes allow the authors to fully explore, define and delimit this novel field of research for future application in educational and social contexts. Finally, the book discusses contributions and limitations which have emerged from different methodologies of research, potential educational applications and concepts of human-robot interaction for the development of the above paradigms.
